## 1 INLEIDING

SwifterwinT B.V. en Nuon Wind Development B.V. hebben een samenwerkingsovereenkomst gesloten ten behoeve van de realisatie van een nieuw windpark: Windplan Blauw. Deze zal in het gebied tussen Lelystad, Swifterbant en Dronten komen te liggen en zal bestaan uit zes inrichtingen. Om het windpark te kunnen realiseren vraagt KlokbekewinT B.V. een omgevingsvergunning aan. Deze notitie bevat het slagschaduwonderzoek voor inrichting 1: Windpark Klokbekeertocht.

Het doel van dit onderzoek is het bepalen van de slagschaduweffecten ter plaatse van de gevoelige objecten rondom het windpark.

De inrichtingen van het windpark zijn opgenomen in afbeelding 1.1.

Afbeelding 1.1 Zes inrichtingen binnen het gehele windpark, overige turbines en bedrijfswoningen

## 2 SLAGSCHADUW

Een draaiende windturbine zorgt voor slagschaduw. Op dagen met bepaalde omstandigheden (voldoende zonlicht, wind en positie ten opzichte van de zon) kan deze slagschaduw als hinderlijk ervaren worden door omwonenden.

In de Activiteitenregeling is vastgesteld dat, wanneer de afstand tussen gevoelige objecten (zoals woningen) en een windturbine minder dan twaalf maal de rotordiameter bedraagt en gemiddeld meer dan zeventien dagen per jaar gedurende meer dan twintig minuten per slagschaduw optreedt, een stilstandvoorziening is vereist.

---

### Wettelijke normen slagschaduw

Ten aanzien van slagschaduw wordt in artikel 3.14 onder 4. van het Activiteitenbesluit verwezen naar de bij de ministeriële regeling te stellen maatregelen (de Activiteitenregeling). In deze regeling is in artikel 3.12 voorgeschreven dat een windturbine is voorzien van een automatische stilstandvoorziening die de windturbine afschakelt indien slagschaduw optreedt ter plaatse van gevoelige objecten voor zover de afstand tussen de windturbine en de woning minder bedraagt dan twaalf maal de rotordiameter<sup>1</sup> en gemiddeld meer dan zeventien dagen per jaar gedurende meer dan twintig minuten slagschaduw kan optreden. Ook voor slagschaduw kan het bevoegd gezag maatwerkvoorschriften vaststellen.

---

### Uitgangspunten

Rondom de turbines van Windplan Blauw liggen gevoelige bestemmingen binnen twaalf maal de rotordiameter. Het turbinetype is nog onbekend, voor het onderzoek naar slagschaduweffecten is daarom een worst-case turbine gebruikt. Rotordiameter en ashoogte zijn bepalend voor slagschaduw. Grotere rotordiameter en hogere ashoogte leidt altijd tot meer slagschaduw effecten.

---

<sup>1</sup> In alle gevallen ligt de berekende slagschaduwcontour lager dan twaalf maal de rotordiameter.

Bij het bepalen van een worst-case turbine is in deelgebieden IJsselmeer en West een maximale tiphoogte aangehouden van 213 meter. In deelgebied Oost is de maximale tiphoogte 248 meter.

Binnen de Elandtocht en de Rendiertocht geldt de maximale hoogte van 248 meter. De worst-case afmeting is dan 166 meter ashoogte en 164 meter rotordiameter (248 meter in totaal). Voor turbines langs de Rivierduintocht, de Klokbekertocht en Buitendijks geldt een maximale tiphoogte van 213 meter. De worst-case afmetingen voor deze gebieden zijn dan 131 meter ashoogte en 164 meter rotordiameter (213 meter in totaal). De turbine-eigenschappen zijn weergegeven in de onderstaande tabel.

Tabel 2.1 Worst-case windturbines gebruikt voor slagschaduw analyse

Turbine	Vermogen (kW)	Ashoogte (meter)	Rotordiameter (meter)	Tiphoogte (meter)
WPBlauw WT4	5.000	131	164	213
WPBlauw WT2	5.000	166	164	248

Om aan de norm te toetsen is slagschaduw vertaald in de verwachte hinderduur. Dit is het aantal uren in een jaar dat slagschaduw wordt veroorzaakt. De volgende data is gebruikt voor de analyse:

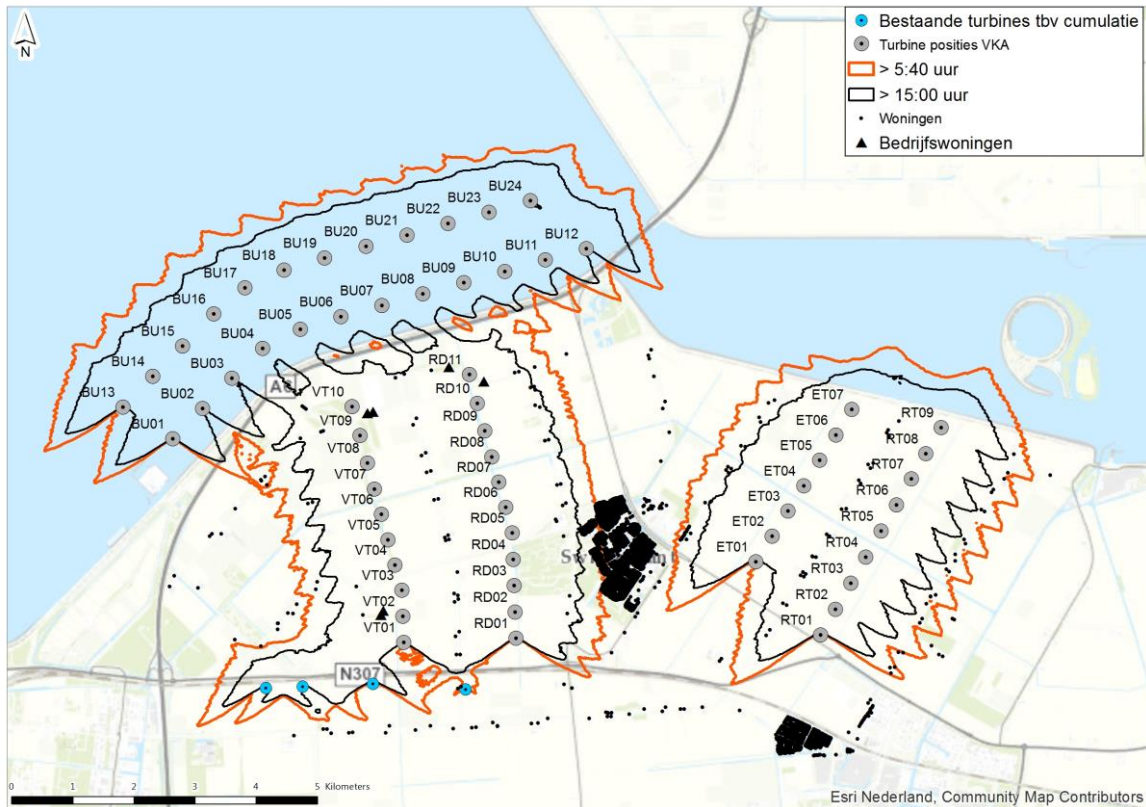

- aangezien het een gemiddelde betreft, wordt uitgegaan van het gemiddeld aantal zonuren als opgegeven door het KNMI voor locatie Lelystad tussen 2008 en 2017;
- tevens zijn de windrichting en de windsnelheid meegenomen in de analyse. De onderlinge beïnvloeding, oftewel windzog, is berekend middels N/O Jensen Wake Model. Voor de meteorologische gegevens is uitgegaan van een Mesoscale dataset van EMDConWx. De dataset beslaat gebieden met een resolutie van drie maal drie kilometer en historische uurlijkse waarden (richting, snelheid, temperatuur, et cetera) voor heel Europa;
- in de omgeving zijn weinig objecten die het windprofiel beïnvloeden. Er is uitgegaan van de volgende terreinstandaard binnen WindPro: open farmland;
- cumulatie van slagschaduw op gevoelige objecten door andere turbines in de omgeving is weergegeven in de resultaten. Het gaat in dit geval om cumulatie met de turbines voor de overige inrichtingen. In enkele gevallen komt het voor dat de hoeveelheid cumulatieve slagschaduw lager is dan voor de enkele inrichting. Dit heeft te maken met windafvang tussen turbines; die is hoger wanneer alle inrichtingen worden meegenomen. Windafvang resulteert namelijk in minder draaiuren waardoor het slagschaduw effect ook minder wordt.

Omdat niet te bepalen is hoeveel minuten slagschaduw per keer plaatsvindt, wordt getoetst aan een verwachte slagschaduwduur van maximaal 17 (dagen) \* 20 (minuten) = 340 minuten, oftewel 5 uur en 40 minuten. Deze toetsing is strenger dan de wettelijke eis, aangezien in deze berekening alle slagschaduwminuten zijn meegenomen, dus ook de dagen dat het minder dan twintig minuten optreedt.

### Toetsing

De onderstaande resultaten zijn opgesteld voor windpark Klokbekertocht (inrichting 1). De inrichting is individueel doorgerekend om de slagschaduw effecten van de betreffende lijnopstelling te kwantificeren. Vervolgens zijn ook de omliggende windturbines meegenomen (inrichting 1 tot en met 6 en bestaande windturbines) om de cumulatieve slagschaduw effecten te beoordelen. De onderstaande afbeelding toont het projectgebied met de inrichtingen en de meegenomen bestaande windturbines.

Afbeelding 2.1 Resultaten slagschaduw analyse met cumulatie

Inrichting 1 zorgt voor slagschaduw effecten bij 65 gevoelige objecten<sup>1</sup>. Hiervan liggen 47 objecten binnen de contour van 5 uur en 40 minuten, deze objecten en verwachte hinderduur is terug te vinden in bijlage I. Van deze 47 objecten zijn 4 aangemerkt als bedrijfswoning van de initiatiefnemer.

Diverse gevoelige objecten ondervinden verhoogde slagschaduw effecten door cumulatie met de overige inrichtingen. In bijlage I zijn deze effecten weergegeven in de laatste kolom. In totaal liggen er 575 objecten binnen de contour wanneer cumulatie met de andere inrichtingen van Windplan Blauw wordt meegenomen. De modelresultaten van deze analyse zijn terug te vinden in bijlage II en voor het VKA met cumulatie in bijlage III.

### Mitigatie

De windturbines van Windpark Klokbeektocht (inrichting 1) moeten worden voorzien van een automatische stilstandregeling. Met deze regeling wordt de hinderduur beperkt zodat de norm niet wordt overschreden. De windturbines worden automatisch afgeschakeld zodra er slagschaduw optreedt bij gevoelige objecten, hiermee is overschrijding van de norm uitgesloten.

Voor de definitieve keuze van het turbintype wordt ook inzichtelijk gemaakt welke maximale slagschaduwduur en mitigatie van toepassing is gegeven de dimensies van het geselecteerde type windturbine. Dit wordt uiterlijk drie maanden voor start van de bouw toegestuurd aan het bevoegd gezag.

<sup>1</sup> Zonder cumulatie met de andere inrichtingen. Inclusief cumulatie met omliggende windturbines buiten het projectgebied.

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

## BIJLAGE: WINDPRO OUTPUT VKA CUMULATIE

## SHADOW - Main Result

Calculation: Windplan Blauw - Cumulatie alle inrichtingen  
Assumptions for shadow calculations

Maximum distance for influence  
Calculate only when more than 20 % of sun is covered by the blade  
Please look in WTG table

Minimum sun height over horizon for influence 5 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

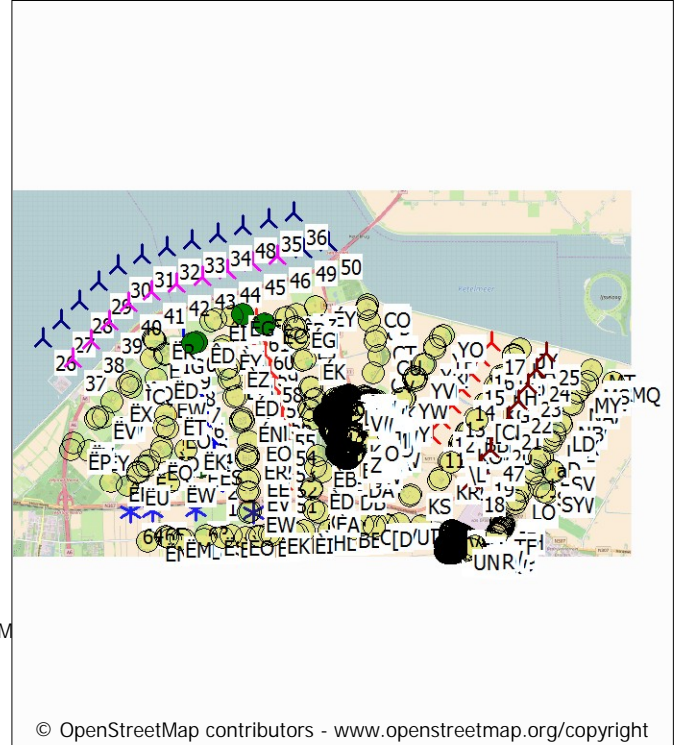

Sunshine probability S (Average daily sunshine hours) []  
Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
2.11 3.10 5.00 6.82 7.26 7.17 7.02 6.80 5.35 3.93 2.03 1.78

Operational hours are calculated from WTGs in calculation and wind distribution:  
EmdConwx\_N52.580\_E005.600 (1)

Operational time  
N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
473 403 513 624 478 415 611 1,062 1,312 960 671 719 8,240  
Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM)  
Obstacles used in calculation  
Eye height: 1.5 m  
Grid resolution: 10.0 m

All coordinates are in  
Dutch Stereo-RD/NAP 2008

## 1 INLEIDING

SwifterwinT B.V. en Nuon Wind Development B.V. hebben een samenwerkingsovereenkomst gesloten ten behoeve van de realisatie van een nieuw windpark: Windplan Blauw. Deze zal in het gebied tussen Lelystad, Swifterbant en Dronten komen te liggen en zal bestaan aan uit zes inrichtingen. Om het windpark te kunnen realiseren vraagt RivierduinwinT B.V. een omgevingsvergunning aan. Deze notitie bevat het slagschaduwonderzoek voor inrichting 2: Windpark Rivierduintocht.

Het doel van dit onderzoek is het bepalen van de slagschaduweffecten ter plaatse van de gevoelige objecten rondom het windpark.

De inrichtingen van het windpark zijn opgenomen in afbeelding 1.1.

Afbeelding 1.1 Zes inrichtingen binnen het gehele windpark, overige turbines en bedrijfswoningen

## 2 SLAGSCHADUW

Een draaiende windturbine zorgt voor slagschaduw. Op dagen met bepaalde omstandigheden (voldoende zonlicht, wind en positie ten opzichte van de zon) kan deze slagschaduw als hinderlijk ervaren worden door omwonenden.

In de Activiteitenregeling is vastgesteld dat, wanneer de afstand tussen gevoelige objecten (zoals woningen) en een windturbine minder dan twaalf maal de rotordiameter bedraagt en gemiddeld meer dan zeventien dagen per jaar gedurende meer dan twintig minuten per slagschaduw optreedt, een stilstandvoorziening is vereist.

---

### Wettelijke normen slagschaduw

Ten aanzien van slagschaduw wordt in artikel 3.14 onder 4. van het Activiteitenbesluit verwezen naar de bij de ministeriële regeling te stellen maatregelen (de Activiteitenregeling). In deze regeling is in artikel 3.12 voorgeschreven dat een windturbine is voorzien van een automatische stilstandvoorziening die de windturbine afschakelt indien slagschaduw optreedt ter plaatse van gevoelige objecten voor zover de afstand tussen de windturbine en de woning minder bedraagt dan twaalf maal de rotordiameter<sup>1</sup> en gemiddeld meer dan zeventien dagen per jaar gedurende meer dan twintig minuten slagschaduw kan optreden. Ook voor slagschaduw kan het bevoegd gezag maatwerkvoorschriften vaststellen.

---

### Uitgangspunten

Rondom de turbines van Windplan Blauw liggen gevoelige bestemmingen binnen twaalf maal de rotordiameter. Het turbinetype is nog onbekend, voor het onderzoek naar slagschaduw effecten is daarom een worst-case turbine gebruikt. Rotordiameter en ashoogte zijn bepalend voor slagschaduw. Grotere rotordiameter en hogere ashoogte leidt altijd tot meer slagschaduw effecten.

---

<sup>1</sup> In alle gevallen ligt de berekende slagschaduwcontour lager dan twaalf maal de rotordiameter.

Bij het bepalen van een worst-case turbine is in deelgebieden IJsselmeer en West een maximale tiphoogte aangehouden van 213 meter. In deelgebied Oost is de maximale tiphoogte 248 meter.

Binnen de Elandtocht en de Rendiertocht geldt de maximale hoogte van 248 meter. De worst-case afmeting is dan 166 meter ashoogte en 164 meter rotordiameter (248 meter in totaal). Voor turbines langs de Rivierduintocht, de Klokbekertocht en Buitendijks geldt een maximale tiphoogte van 213 meter. De worst-case afmetingen voor deze gebieden zijn dan 131 meter ashoogte en 164 meter rotordiameter (213 meter in totaal). De turbine-eigenschappen zijn weergegeven in de onderstaande tabel.

Tabel 2.1 Worst-case windturbines gebruikt voor slagschaduw analyse

Turbine	Vermogen (kW)	Ashoogte (meter)	Rotordiameter (meter)	Tiphoogte (meter)
WPBlauw WT4	5.000	131	164	213
WPBlauw WT2	5.000	166	164	248

Om aan de norm te toetsen is slagschaduw vertaald in de verwachte hinderduur. Dit is het aantal uren in een jaar dat slagschaduw wordt veroorzaakt. De volgende data is gebruikt voor de analyse:

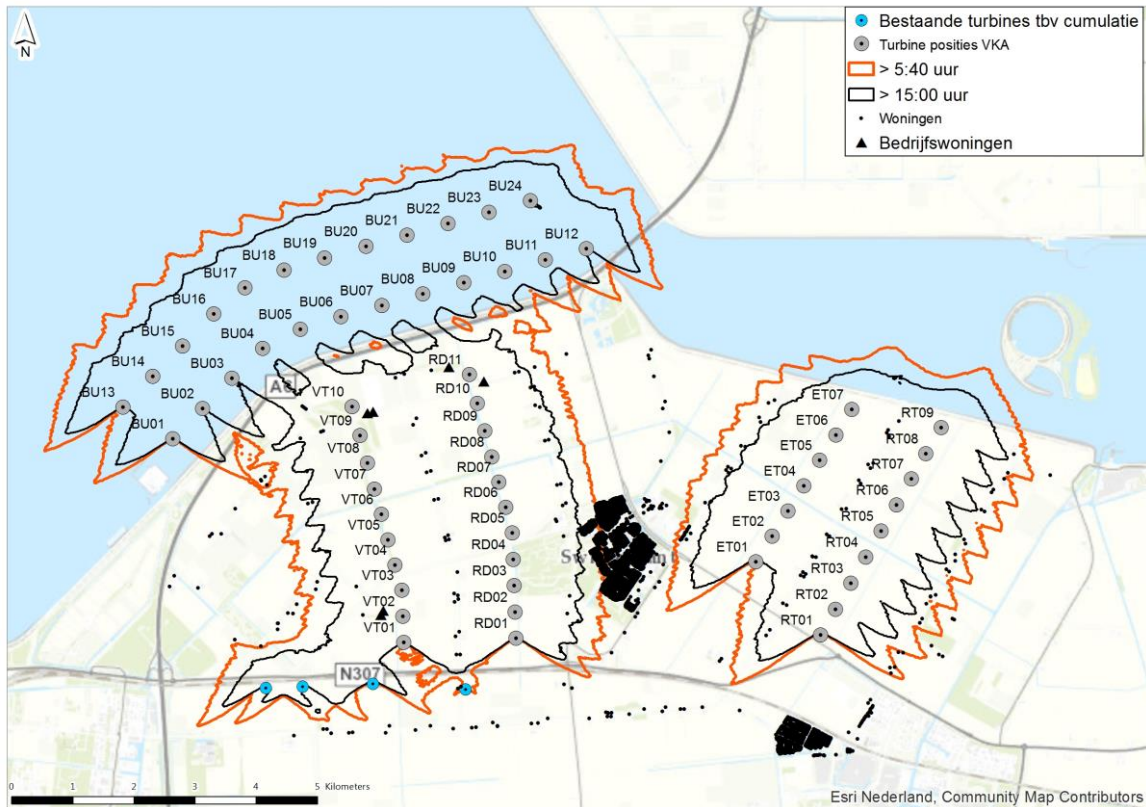

- aangezien het een gemiddelde betreft, wordt uitgegaan van het gemiddeld aantal zonuren als opgegeven door het KNMI voor locatie Lelystad tussen 2008 en 2017;
- tevens zijn de windrichting en de windsnelheid meegenomen in de analyse. De onderlinge beïnvloeding, oftewel windzog, is berekend middels N/O Jensen Wake Model. Voor de meteorologische gegevens is uitgegaan van een Mesoscale dataset van EMDConWx. De dataset beslaat gebieden met een resolutie van drie maal drie kilometer en historische uurlijkse waarden (richting, snelheid, temperatuur, et cetera) voor heel Europa;
- in de omgeving zijn weinig objecten die het windprofiel beïnvloeden. Er is uitgegaan van de volgende terrein standaard binnen WindPro: open farmland;
- cumulatie van slagschaduw op gevoelige objecten door andere turbines in de omgeving is weergegeven in de resultaten. Het gaat in dit geval om cumulatie met de turbines voor de overige inrichtingen. In enkele gevallen komt het voor dat de hoeveelheid cumulatieve slagschaduw lager is dan voor de enkele inrichting. Dit heeft te maken met wind afvang tussen turbines; die is hoger wanneer alle inrichtingen worden meegenomen. Windafvang resulteert namelijk in minder draaiuren waardoor het slagschaduw effect ook minder wordt.

Omdat niet te bepalen is hoeveel minuten slagschaduw per keer plaatsvindt, wordt getoetst aan een verwachte slagschaduwduur van maximaal 17 (dagen) \* 20 (minuten) = 340 minuten, oftewel 5 uur en 40 minuten. Deze toetsing is strenger dan de wettelijke eis, aangezien in deze berekening alle slagschaduwminuten zijn meegenomen, dus ook de dagen dat het minder dan 20 minuten optreedt.

### Toetsing

De onderstaande resultaten zijn opgesteld voor windpark Rivierduintocht (inrichting 2). De inrichting is individueel doorgerekend om de slagschaduw effecten van de betreffende lijnopstelling te kwantificeren. Vervolgens zijn ook de omliggende windturbines meegenomen (inrichting 1 tot en met 6 en bestaande windturbines) om de cumulatieve slagschaduw effecten te beoordelen. De onderstaande afbeelding toont het projectgebied met de inrichtingen en de meegenomen bestaande windturbines.

Afbeelding 2.1 Resultaten slagschaduw analyse met cumulatie

Inrichting 2 zorgt voor slagschaduw effecten bij 1.996 gevoelige objecten<sup>1</sup>. Hiervan liggen 485 objecten binnen de toetsingsnorm van 5 uur en 40 minuten, deze objecten en verwachte hinderduur is terug te vinden in bijlage I. Van deze 485 objecten zijn 2 aangemerkt als bedrijfswoning van de initiatiefnemer en 1 aangemerkt als gezondheidszorg of onderwijs.

Diverse gevoelige objecten ondervinden verhoogde slagschaduw effecten door cumulatie met de overige inrichtingen. In bijlage I zijn deze effecten weergegeven in de laatste kolom. In totaal liggen er 575 objecten binnen de contour wanneer cumulatie met de andere inrichtingen van Windplan Blauw wordt meegenomen. De modelresultaten van deze analyse zijn terug te vinden in bijlage II en voor het VKA met cumulatie in bijlage III.

### Mitigatie

De windturbines van Windpark Rivierduintocht (inrichting 2) moeten worden voorzien van een automatische stilstandregeling. Met deze regeling wordt de hinderduur beperkt zodat de norm niet wordt overschreden. De windturbines worden automatisch afgeschakeld zodra er slagschaduw optreedt bij gevoelige objecten, hiermee is overschrijding van de norm uitgesloten.

Voor de definitieve keuze van het turbinetype wordt ook inzichtelijk gemaakt welke maximale slagschaduwduur en mitigatie van toepassing is gegeven de dimensies van het geselecteerde type windturbine. Dit wordt uiterlijk drie maanden voor start van de bouw toegestuurd aan het bevoegd gezag.

<sup>1</sup> Zonder cumulatie met de andere inrichtingen. Inclusief cumulatie met omliggende windturbines buiten het projectgebied.

## BIJLAGE: WINDPRO OUTPUT INRICHTING 2

## SHADOW - Main Result

Calculation: Windplan Blauw -Inrichting 2 (SB-4)  
Assumptions for shadow calculations

Maximum distance for influence  
Calculate only when more than 20 % of sun is covered by the blade  
Please look in WTG table

Minimum sun height over horizon for influence 5 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

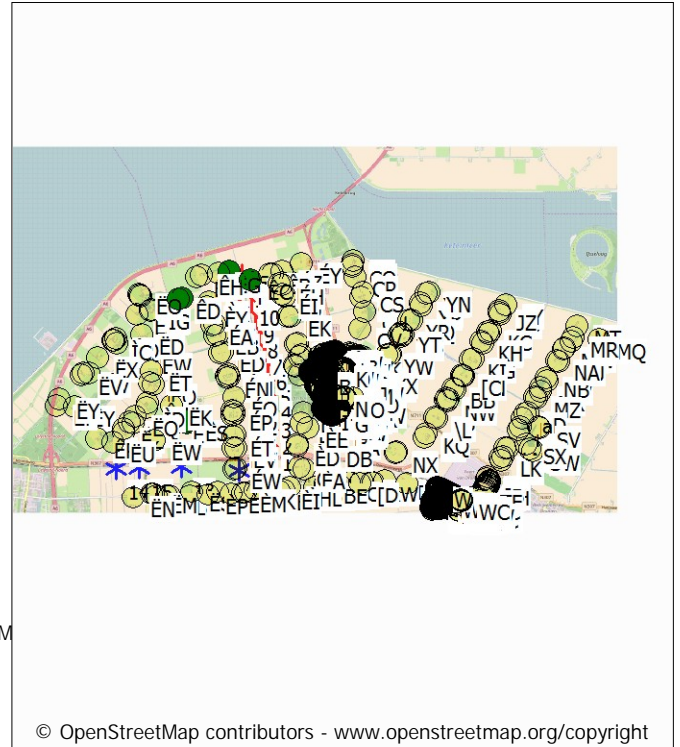

Sunshine probability S (Average daily sunshine hours) []  
Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
2.11 3.10 5.00 6.82 7.26 7.17 7.02 6.80 5.35 3.93 2.03 1.78

Operational hours are calculated from WTGs in calculation and wind distribution:  
EmdConwx\_N52.580\_E005.600 (1)

Operational time  
N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
482 416 538 645 479 434 650 1,132 1,281 954 645 751 8,407  
Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM)  
Obstacles used in calculation  
Eye height: 1.5 m  
Grid resolution: 10.0 m

All coordinates are in  
Dutch Stereo-RD/NAP 2008

4	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (177)	247:07	59:03
5	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (178)	242:55	59:44
6	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (179)	260:30	66:18
7	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (180)	171:44	42:18
8	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (181)	188:50	42:48
9	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (182)	259:50	54:05
10	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (183)	535:44	104:57
11	WPBlauw WT4 5000 164.0 !-! hub: 131.0 m (TOT: 213.0 m) (184)	453:58	119:02
12	LAGERWEY 80 18.0 !O! hub: 40.0 m (TOT: 49.0 m) (121)	106:04	26:34
13	LAGERWEY L100-2.5MW 2520 100.0 !O! hub: 135.0 m (TOT: 185.0 m) (122)	29:51	5:54
14	ENERCON E-115 3000 115.7 !O! hub: 135.4 m (TOT: 193.3 m) (123)	67:13	10:48
15	ENERCON E-115 3000 115.7 !O! hub: 135.4 m (TOT: 193.3 m) (124)	85:42	14:24

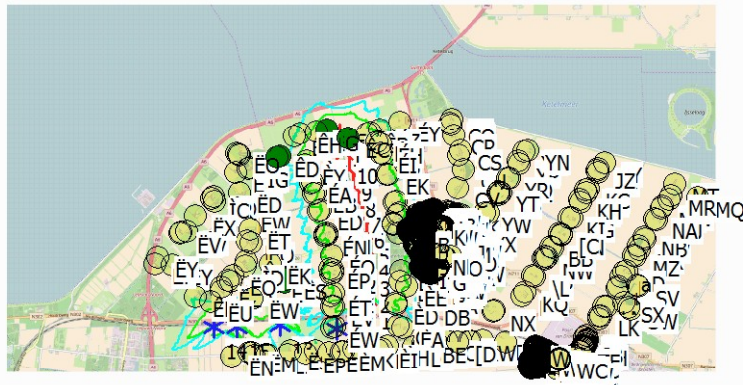

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

 Flicker map level: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM 1 arc-second)

## BIJLAGE: WINDPRO OUTPUT VKA CUMULATIE

## SHADOW - Main Result

Calculation: Windplan Blauw - Cumulatie alle inrichtingen  
Assumptions for shadow calculations

Maximum distance for influence  
Calculate only when more than 20 % of sun is covered by the blade  
Please look in WTG table

Minimum sun height over horizon for influence 5 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

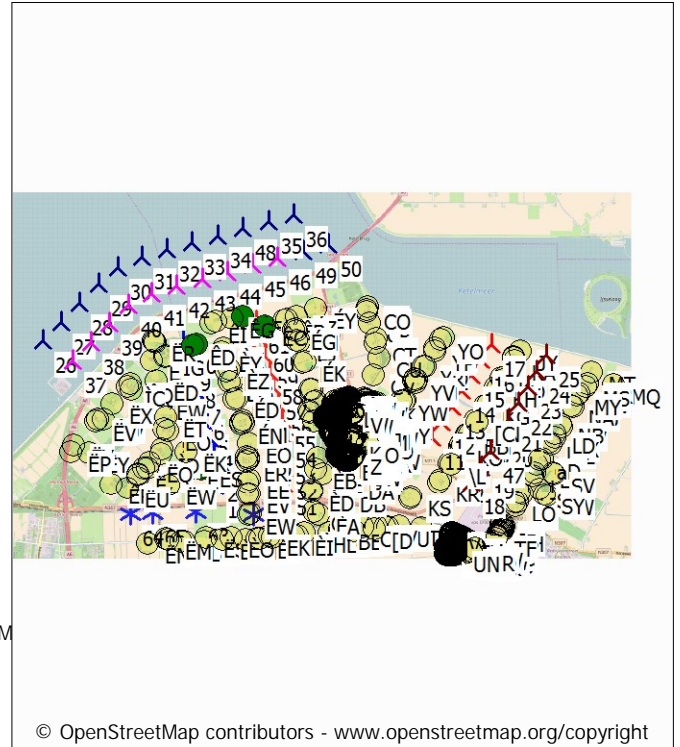

Sunshine probability S (Average daily sunshine hours) []  
Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
2.11 3.10 5.00 6.82 7.26 7.17 7.02 6.80 5.35 3.93 2.03 1.78

Operational hours are calculated from WTGs in calculation and wind distribution:  
EmdConwx\_N52.580\_E005.600 (1)

Operational time  
N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
473 403 513 624 478 415 611 1,062 1,312 960 671 719 8,240  
Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM)  
Obstacles used in calculation  
Eye height: 1.5 m  
Grid resolution: 10.0 m

All coordinates are in  
Dutch Stereo-RD/NAP 2008

## 1 INLEIDING

SwifterwinT B.V. en Nuon Wind Development B.V. hebben een samenwerkingsovereenkomst gesloten ten behoeve van de realisatie van een nieuw windpark: Windplan Blauw. Deze zal in het gebied tussen Lelystad, Swifterbant en Dronten komen te liggen en zal bestaan aan uit zes inrichtingen. Om het windpark te kunnen realiseren vraagt ElandwinT B.V. een omgevingsvergunning aan. Deze notitie bevat het slagschaduwonderzoek voor inrichting 3: Windpark Elandtocht.

Het doel van dit onderzoek is het bepalen van de slagschaduweffecten ter plaatse van de gevoelige objecten rondom het windpark.

De inrichtingen van het windpark zijn opgenomen in afbeelding 1.1.

Afbeelding 1.1 Zes inrichtingen binnen het gehele windpark, overige turbines en bedrijfswoningen

## 2 SLAGSCHADUW

Een draaiende windturbine zorgt voor slagschaduw. Op dagen met bepaalde omstandigheden (voldoende zonlicht, wind en positie ten opzichte van de zon) kan deze slagschaduw als hinderlijk ervaren worden door omwonenden.

In de Activiteitenregeling is vastgesteld dat, wanneer de afstand tussen gevoelige objecten (zoals woningen) en een windturbine minder dan twaalf maal de rotordiameter bedraagt en gemiddeld meer dan zeventien dagen per jaar gedurende meer dan twintig minuten per slagschaduw optreedt, een stilstandvoorziening is vereist.

---

### Wettelijke normen slagschaduw

Ten aanzien van slagschaduw wordt in artikel 3.14 onder 4. van het Activiteitenbesluit verwezen naar de bij de ministeriële regeling te stellen maatregelen (de Activiteitenregeling). In deze regeling is in artikel 3.12 voorgeschreven dat een windturbine is voorzien van een automatische stilstandvoorziening die de windturbine afschakelt indien slagschaduw optreedt ter plaatse van gevoelige objecten voor zover de afstand tussen de windturbine en de woning minder bedraagt dan twaalf maal de rotordiameter<sup>1</sup> en gemiddeld meer dan zeventien dagen per jaar gedurende meer dan twintig minuten slagschaduw kan optreden. Ook voor slagschaduw kan het bevoegd gezag maatwerkvoorschriften vaststellen.

---

### Uitgangspunten

Rondom de turbines van Windplan Blauw liggen gevoelige bestemmingen binnen twaalf maal de rotordiameter. Het turbinetype is nog onbekend, voor het onderzoek naar slagschaduw effecten is daarom een worst-case turbine gebruikt. Rotordiameter en ashoogte zijn bepalend voor slagschaduw. Grotere rotordiameter en hogere ashoogte leidt altijd tot meer slagschaduw effecten.

---

<sup>1</sup> In alle gevallen ligt de berekende slagschaduwcontour lager dan twaalf maal de rotordiameter.

Bij het bepalen van een worst-case turbine is in deelgebieden IJsselmeer en West een maximale tiphoogte aangehouden van 213 meter. In deelgebied Oost is de maximale tiphoogte 248 meter.

Binnen de Elandtocht en de Rendiertocht geldt de maximale hoogte van 248 meter. De worst-case afmeting is dan 166 meter ashoogte en 164 meter rotordiameter (248 meter in totaal). Voor turbines langs de Rivierduintocht, de Klokbekertocht en Buitendijks geldt een maximale tiphoogte van 213 meter. De worst-case afmetingen voor deze gebieden zijn dan 131 meter ashoogte en 164 meter rotordiameter (213 meter in totaal). De turbine-eigenschappen zijn weergegeven in de onderstaande tabel.

Tabel 2.1 Worst-case windturbines gebruikt voor slagschaduw analyse

Turbine	Vermogen (kW)	Ashoogte (meter)	Rotordiameter (meter)	Tiphoogte (meter)
WPBlauw WT4	5.000	131	164	213
WPBlauw WT2	5.000	166	164	248

Om aan de norm te toetsen is slagschaduw vertaald in de verwachte hinderduur. Dit is het aantal uren in een jaar dat slagschaduw wordt veroorzaakt. De volgende data is gebruikt voor de analyse:

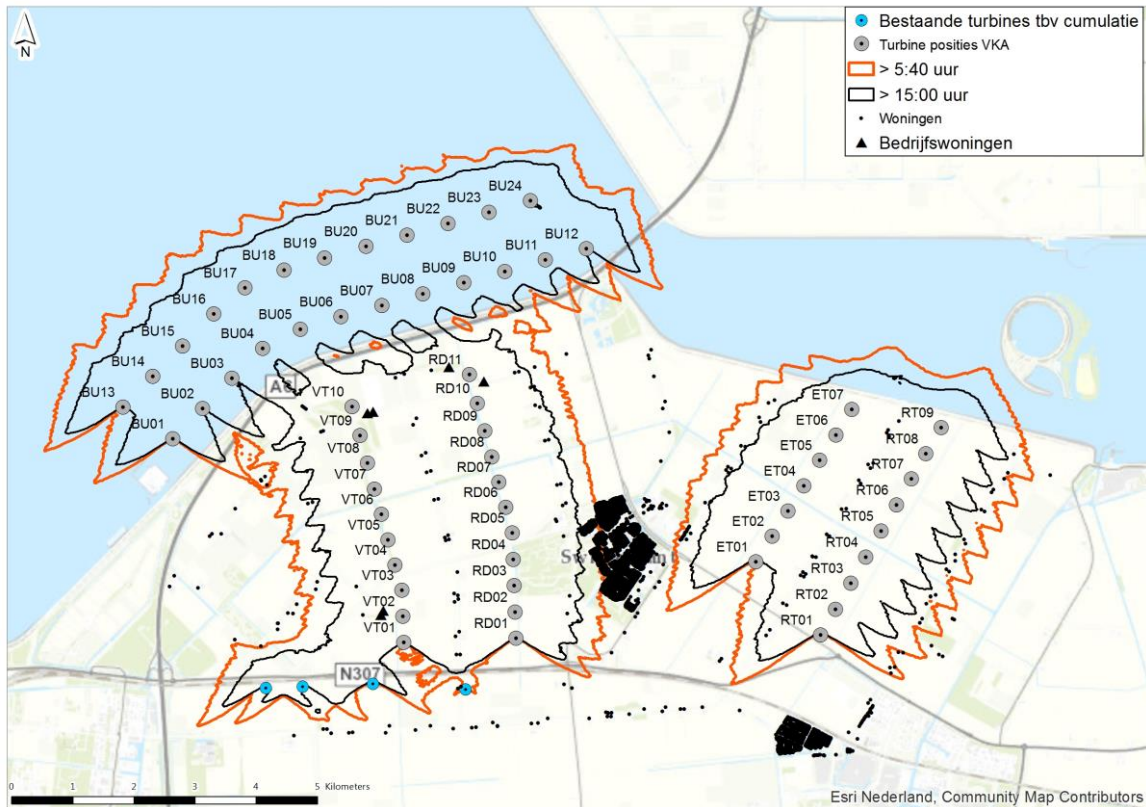

- aangezien het een gemiddelde betreft, wordt uitgegaan van het gemiddeld aantal zonuren als opgegeven door het KNMI voor locatie Lelystad tussen 2008 en 2017;
- tevens zijn de windrichting en de windsnelheid meegenomen in de analyse. De onderlinge beïnvloeding, oftewel windzog, is berekend middels N/O Jensen Wake Model. Voor de meteorologische gegevens is uitgegaan van een Mesoscale dataset van EMDConWx. De dataset beslaat gebieden met een resolutie van drie maal drie kilometer en historische uurlijkse waarden (richting, snelheid, temperatuur, et cetera) voor heel Europa;
- in de omgeving zijn weinig objecten die het windprofiel beïnvloeden. Er is uitgegaan van de volgende terrein standaard binnen WindPro: open farmland;
- cumulatie van slagschaduw op gevoelige objecten door andere turbines in de omgeving is weergegeven in de resultaten. Het gaat in dit geval om cumulatie met de turbines voor de overige inrichtingen. In enkele gevallen komt het voor dat de hoeveelheid cumulatieve slagschaduw lager is dan voor de enkele inrichting. Dit heeft te maken met wind afvang tussen turbines; die is hoger wanneer alle inrichtingen worden meegenomen. Windafvang resulteert namelijk in minder draaiuren waardoor het slagschaduw effect ook minder wordt.

Omdat niet te bepalen is hoeveel minuten slagschaduw per keer plaatsvindt, wordt getoetst aan een verwachte slagschaduwduur van maximaal 17 (dagen) \* 20 (minuten) = 340 minuten, oftewel 5 uur en 40 minuten. Deze toetsing is strenger dan de wettelijke eis, aangezien in deze berekening alle slagschaduwminuten zijn meegenomen, dus ook de dagen dat het minder dan 20 minuten optreedt.

### Toetsing

De onderstaande resultaten zijn opgesteld voor windpark Elandtocht (inrichting 3). De inrichting is individueel doorgerekend om de slagschaduw effecten van de betreffende lijnopstelling te kwantificeren. Vervolgens zijn ook de omliggende windturbines meegenomen (inrichting 1 tot en met 6 en bestaande windturbines) om de cumulatieve slagschaduw effecten te beoordelen. De onderstaande afbeelding toont het projectgebied met de inrichtingen en de meegenomen bestaande windturbines.

Afbeelding 2.1 Resultaten slagschaduw analyse met cumulatie

Inrichting 3 zorgt voor slagschaduw effecten bij 445 gevoelige objecten<sup>1</sup>. Hiervan liggen 48 objecten binnen de toetsingsnorm van 5 uur en 40 minuten, deze objecten en verwachte hinderduur is terug te vinden in bijlage I. Van deze 48 objecten zijn er geen objecten aangemerkt als bedrijfswoning, gezondheidszorg of onderwijs van de initiatiefnemer.

Diverse gevoelige objecten ondervinden verhoogde slagschaduw effecten door cumulatie met de overige inrichtingen. In bijlage I zijn deze effecten weergegeven in de laatste kolom. In totaal liggen er 575 objecten binnen de contour wanneer cumulatie met de andere inrichtingen van Windplan Blauw wordt meegenomen. De modelresultaten van deze analyse zijn terug te vinden in bijlage II en voor het VKA met cumulatie in bijlage III.

### Mitigatie

De windturbines van Windpark Elandtocht (inrichting 3) moeten worden voorzien van een automatische stilstandregeling. Met deze regeling wordt de hinderduur beperkt zodat de norm niet wordt overschreden. De windturbines worden automatisch afgeschakeld zodra er slagschaduw optreedt bij gevoelige objecten, hiermee is overschrijding van de norm uitgesloten.

Voor de definitieve keuze van het turbinetype wordt ook inzichtelijk gemaakt welke maximale slagschaduwduur en mitigatie van toepassing is gegeven de dimensies van het geselecteerde type windturbine. Dit wordt uiterlijk drie maanden voor start van de bouw toegestuurd aan het bevoegd gezag.

<sup>1</sup> Zonder cumulatie met de andere inrichtingen. Inclusief cumulatie met omliggende windturbines buiten het projectgebied.

## BIJLAGE: WINDPRO OUTPUT INRICHTING 3

### SHADOW - Main Result

Calculation: Slagschaduw WPBlauw - Vergunningen - Inrichting 3 Elandtocht

#### Assumptions for shadow calculations

Maximum distance for influence  
 Calculate only when more than 20 % of sun is covered by the blade  
 Please look in WTG table

Minimum sun height over horizon for influence 5 °  
 Day step for calculation 1 days  
 Time step for calculation 1 minutes

Sunshine probability S (Average daily sunshine hours) []  
 Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
 2.11 3.10 5.00 6.82 7.26 7.17 7.02 6.80 5.35 3.93 2.03 1.78

Operational hours are calculated from WTGs in calculation and wind distribution:

EmdConwx\_N52.580\_E005.600 (1)

Operational time  
 N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
 481 410 521 634 486 422 622 1,081 1,334 976 682 732 8,382  
 Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
 Height contours used: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM)  
 Obstacles used in calculation  
 Eye height: 1.5 m  
 Grid resolution: 10.0 m

All coordinates are in Dutch Stereo-RD/NAP 2008

## SHADOW - Main Result

Calculation: Slagschaduw WPBlauw - Vergunningen - Inrichting 3 Elandtocht

Total amount of flickering on the shadow receptors caused by each WTG

No.	Name	Worst case [h/year]	Expected [h/year]
ET01	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (517)	305:25	72:03
ET02	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (518)	230:07	54:19
ET03	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (519)	189:56	42:43
ET04	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (520)	209:59	49:12
ET05	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (521)	273:08	63:42
ET06	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (522)	145:08	38:35
ET07	WPBlauw WT2 5000 164.0 !O! hub: 166.0 m (TOT: 248.0 m) (523)	139:23	37:14

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

New WTG Shadow receptor

## BIJLAGE: WINDPRO OUTPUT VKA CUMULATIE

## SHADOW - Main Result

Calculation: Windplan Blauw - Cumulatie alle inrichtingen  
Assumptions for shadow calculations

Maximum distance for influence  
Calculate only when more than 20 % of sun is covered by the blade  
Please look in WTG table

Minimum sun height over horizon for influence 5 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

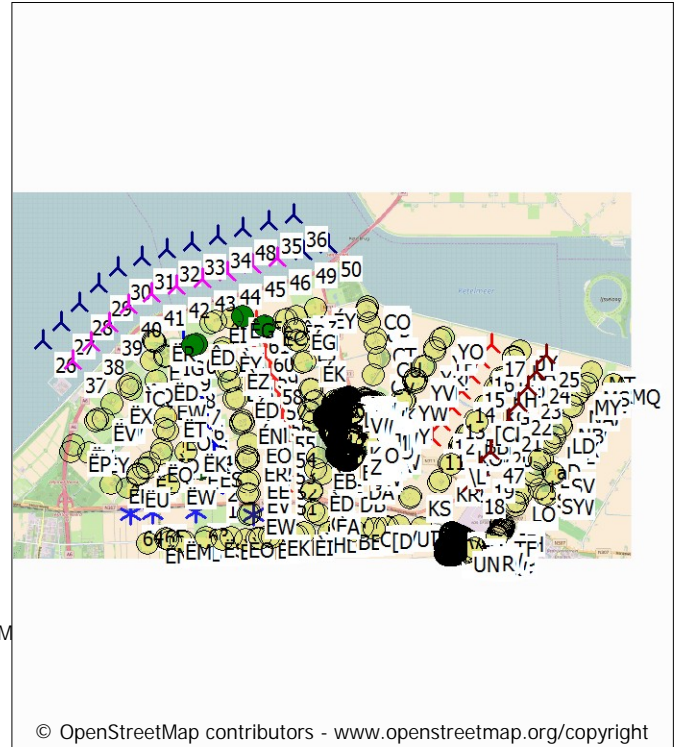

Sunshine probability S (Average daily sunshine hours) []  
Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
2.11 3.10 5.00 6.82 7.26 7.17 7.02 6.80 5.35 3.93 2.03 1.78

Operational hours are calculated from WTGs in calculation and wind distribution:  
EmdConwx\_N52.580\_E005.600 (1)

Operational time  
N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
473 403 513 624 478 415 611 1,062 1,312 960 671 719 8,240  
Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM)  
Obstacles used in calculation  
Eye height: 1.5 m  
Grid resolution: 10.0 m

All coordinates are in  
Dutch Stereo-RD/NAP 2008
