## FIGUREN

- 1 Situatie
  - 1.1 Plangebied en de ruime omgeving
  - 1.2 Indeling plangebied en de directe omgeving
- 2 Rekenmodel luchtkwaliteit
  - 2.1 Huidige en Autonome toekomstige situatie
  - 2.2 Toekomstige situatie na planrealisatie
- 3 Overzicht ingevoerde rekenpunten

## BIJLAGEN

- 1 Invoergegevens rekenmodellen
- 2 Resultaten huidige autonome situatie (2026)
- 3 Resultaten toekomstige autonome situatie (2030)
- 4 Resultaten situatie na planrealisatie (2030)
- 5 Resultaten toekomstige autonome situatie (2035)
- 6 Resultaten situatie na planrealisatie (2035)

## 1 INLEIDING

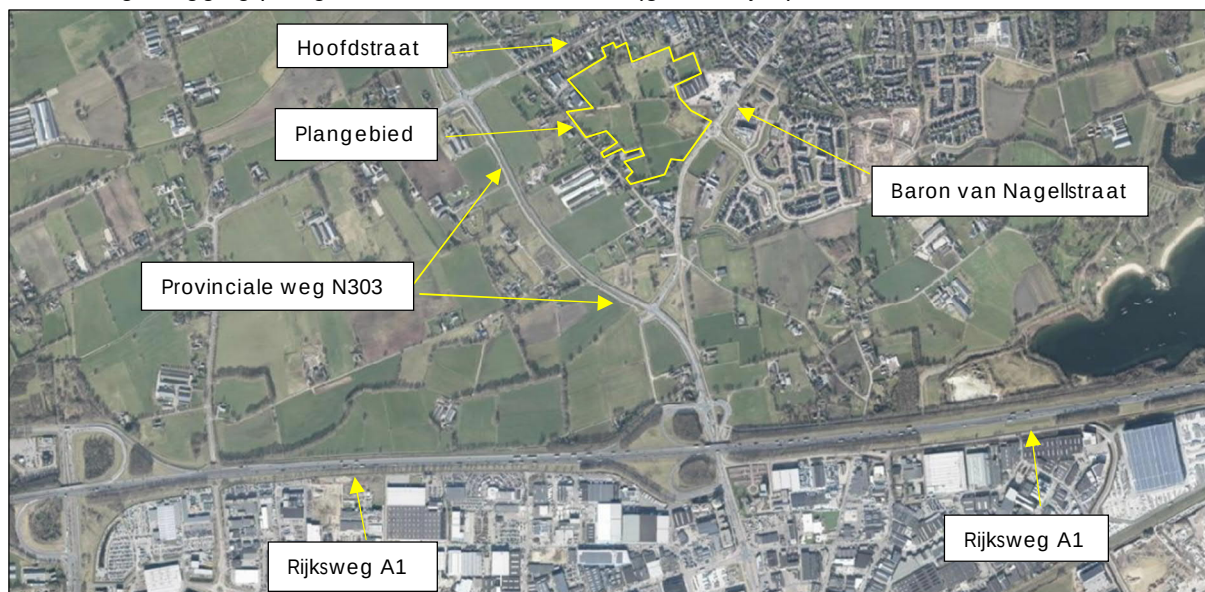

In het kader van het TAM-omgevingsplan voor het plan 'Woonwerklandschap Voorthuizen' is een onderzoek naar de luchtkwaliteit uitgevoerd. De ontwikkeling in het zuidwesten van Voorthuizen voorziet in de realisatie van woningen en bedrijven. Er is een onderzoek luchtkwaliteit uitgevoerd naar de emissies van stikstofdioxide (NO<sub>2</sub>), fijnstof (PM<sub>10</sub> en PM<sub>2,5</sub>) en elementair koolstof (EC). Het doel van het onderzoek is nagaan of aan de relevante omgevingswaarden voor de kwaliteit van de buitenlucht wordt voldaan.

## 2 SITUATIE EN UITGANGSPUNTEN

### 2.1 Bestaande situatie

In afbeelding 1 is de situering van het plangebied en de directe omgeving te zien. Het betreft een stedelijk gebied waarin woningen, kantoren en bedrijven aanwezig zijn. Het plangebied is gesitueerd aan de zuidwestkant van Voorthuizen. In de huidige situatie zijn ter plaatse van het plangebied percelen met een agrarische functie aanwezig. Ten zuiden is de rijksweg A12 gelegen.

Afbeelding 1: Ligging plangebied binnen Voorthuizen (geel omlijnd)

### 2.2 Beoogde situatie, na planrealisatie

De ontwikkeling bestaat uit de realisatie van het plan Woonwerklandschap in Voorthuizen. Met het plan wordt voorzien in een woon-werkgebied, dat ruimte biedt aan kleinschalige bedrijven en woningen. Onderdeel van het project is het aanleggen van een doorgaande weg tussen de Baron van Nagelstraat en de Verbindingsweg. De woningen zijn onderverdeeld in verschillende typologieën, waaronder vrijstaande woningen, twee-onder-een-kapwoningen, rijwoningen en huur- en koopappartementen.

Afbeelding 2: Beoogde situatie

### 3 WETTELIJK KADER

#### 3.1 Stoffen

Bij een onderzoek naar de luchtkwaliteit worden de volgende stoffen onderzocht.

##### Stikstofoxiden

Onder stikstofoxiden ( $\text{NO}_x$ ) wordt verstaan: het totale aantal volumedelen stikstofmonoxide en stikstofdioxide per miljard volumedelen, uitgedrukt in microgrammen stikstofdioxide per kuub. Stikstofoxiden ontstaan bij alle vormen van verbranding op hoge temperatuur. In de atmosfeer reageert het stikstofoxide met ozon ( $\text{O}_3$ ) waarbij het gedeeltelijk wordt omgezet in  $\text{NO}_2$ , afhankelijk van de atmosferische omstandigheden. Bij inhalatie is stikstofdioxide ( $\text{NO}_2$ ) de meest schadelijke component, vooral voor personen met aandoeningen aan de luchtwegen.

##### Fijnstof

De fijnstof fractie wordt ook wel aangeduid als de 'PM<sub>10</sub>-fractie'. Dit staat voor 'Particulate Matter, kleiner dan 10 micron'. In het geval van PM<sub>2,5</sub> betreft dit een diameter van 2,5  $\mu\text{m}$  of kleiner. PM<sub>2,5</sub> wordt ook wel aangeduid als de fijnere fractie van fijnstof. Stofdeeltjes met afmetingen kleiner dan 10  $\mu\text{m}$  kunnen gedurende lange tijd in de lucht blijven zweven. Deze deeltjes worden bij inademing door de mens opgevangen in de neus- en keelholte. Deeltjes tussen 2,5  $\mu\text{m}$  en 10  $\mu\text{m}$  dringen door tot in de luchtwegen, waarbij deeltjes kleiner dan 2,5  $\mu\text{m}$  kunnen doordringen tot in de longblaasjes (respirabel stof).

### Elementair koolstof

Onder elementair koolstof wordt voornamelijk roetdeeltjes verstaan, die ontstaan bij een onvolledige verbranding van fossiele en andere brandstoffen. Een andere benaming voor elementair koolstof is zwarte rook. Zowel de industrie, transportsector als huishoudens veroorzaken roet. Bij de meeste huishoudens is de verwarming de grootste bron van roetvorming. Ook dieselmotoren produceren veel roet, dat bij gebruik in voertuigen tegenwoordig vaak wordt afgevangen met een roetfilter in het uitlaatsysteem. Op korte termijn kan roet irritatie van de ademhalingswegen en de ogen veroorzaken. Ook hart- en vaatziekten zoals bloeddrukverhoging, hartritmestoornissen en hartinfarcten worden in verband gebracht met verhoogde kortdurende blootstelling aan roet.

### 3.2 Niet In Betekende Mate (NIBM)

Een project of activiteit draagt niet in betekende mate bij als de toename van de concentratie  $\text{NO}_2$  en  $\text{PM}_{10}$  niet hoger is dan  $1,2 \mu\text{g}/\text{m}^3$ . Dat is 3% van de omgevingswaarde voor de jaargemiddelde concentraties. Dit volgt uit artikel 5.53 en 5.54 van het Besluit kwaliteit leefomgeving.

Een aantal veelvoorkomende activiteiten dragen niet in betekende mate (NIBM) bij aan de luchtverontreiniging. Daarom is het niet nodig deze 'standaardgevallen' te toetsen aan de rijksomgevingswaarden voor stikstofdioxide ( $\text{NO}_2$ ) en fijnstof ( $\text{PM}_{10}$ ).

Het is niet toegestaan om 'in betekende mate' (IBM) projecten in verschillende NIBM-projecten op te knippen, om zo onder de 3%-bijdrage te blijven (artikel 5.53 Bkl). Als verschillende projecten of activiteiten ruimtelijk of functioneel met elkaar zijn verbonden, dan moet de besluitvormer dit beschouwen als één project

### 3.3 Omgevingswaarden Besluit kwaliteit leefomgeving

In het Besluit kwaliteit leefomgeving zijn voor de bescherming van de gezondheid van de mens, omgevingswaarden aangegeven met betrekking tot de hoogste toelaatbare immissieconcentraties. Deze omgevingswaarden bedragen uitgedrukt in kalenderjaargemiddelde concentraties:

- stikstofdioxide  $\text{NO}_2$ :  $40 \mu\text{g}/\text{m}^3$
- fijnstof  $\text{PM}_{10}$ :  $40 \mu\text{g}/\text{m}^3$
- zeer fijnstof  $\text{PM}_{2,5}$ :  $25 \mu\text{g}/\text{m}^3$

Voor elementair koolstof (EC) geldt geen omgevingswaarde.

### 3.4 Schone lucht akkoord

De gemeente Barneveld heeft zich gecommitteerd aan het Schone Lucht Akkoord. Daarbij wordt toegewerkt naar de advieswaarden van de Wereldgezondheidsorganisatie (WHO) voor luchtkwaliteit in 2030 voor fijn stof en stikstofdioxide. Het betreft hier de WHO-advieswaarden uit 2005. Deze WHO-advieswaarden bedragen uitgedrukt in kalenderjaargemiddelde concentraties:

- stikstofdioxide ( $\text{NO}_2$ )  $40 \mu\text{g}/\text{m}^3$ ;
- fijnstof ( $\text{PM}_{10}$ )  $20 \mu\text{g}/\text{m}^3$ ;
- zeer fijnstof ( $\text{PM}_{2,5}$ )  $10 \mu\text{g}/\text{m}^3$ .

### 3.5 Europese richtlijn luchtkwaliteit

Op 14 oktober 2024 heeft de Europese Raad de nieuwe Europese richtlijn voor luchtkwaliteit aangenomen. Vanaf 2030 gaan er strengere eisen gelden. Uiterlijk in 2030 moeten de jaargemiddelde concentraties gedaald zijn naar:

- stikstofdioxide NO<sub>2</sub>: 20 µg/m<sup>3</sup>;
- fijnstof PM<sub>10</sub>: 20 µg/m<sup>3</sup>;
- zeer fijnstof PM<sub>2,5</sub>: 10 µg/m<sup>3</sup>.

### 3.6 Gemeentelijk omgevingsplan

Een gemeente kan in het omgevingsplan regels stellen ten aanzien van luchtkwaliteit. De gemeente Barneveld heeft geen aanvullende regels opgenomen in het omgevingsplan.

## 4 METHODE VAN ONDERZOEK

### 4.1 Niet In Betekende Mate (NIBM)

Woningen en kantoren zijn NIBM, als de omvang onder een vastgelegde grens ligt. Ook voor een combinatie van woningen en kantoren geeft het Bkl in artikel 5.54 een NIBM-grens. Het aantal NIBM-woningen of kantooroppervlakte is afhankelijk van het aantal ontsluitingswegen. Bij twee ontsluitingswegen zijn meer woningen en kantoren mogelijk dan bij één ontsluitingsweg. Want twee ontsluitingswegen zorgen voor een betere spreiding van de uitstoot, als het verkeer zich (gelijkmatig) verdeelt over de wegen.

Het maximum aantal woningen of kantoren liggen vast in standaardgevallen. De NIBM-grens ligt op 1.500 woningen of 100.000 m<sup>2</sup> kantooroppervlakte (bij één ontsluitingsweg) of 3.000 woningen of 200.000 m<sup>2</sup> kantooroppervlakte (bij twee of meer ontsluitingswegen). Wanneer een project buiten de standaardgevallen van NIBM valt, kan er met behulp van de NIBM-tool of een luchtkwaliteitsonderzoek aannemelijk worden gemaakt dat een project de 3%-grens niet overschrijdt.

Omdat in het voorliggende plan zowel wonen als werken (kleinschalige bedrijven) mogelijk gemaakt wordt, sluit het plan niet aan bij de standaardgevallen 'Niet in betekende mate' (NIBM). Om die reden is er voor gekozen om de situaties te onderzoeken middels berekeningen die zijn uitgevoerd volgens standaardrekenmethode 1 en 2, zoals bedoeld in bijlage XIXa van de Omgevingsregeling (zie paragraaf 4.2).

### 4.2 Gegevens en gehanteerde onderzoeksmethode

Voor het uitvoeren van het onderzoek is gebruik gemaakt van digitale tekeningen van het onderzoeksgebied en de directe omgeving. Dit materiaal is voor de duur van het onderzoek beschikbaar gesteld via de gemeente Barneveld.

Bij de berekeningen is gebruik gemaakt van verkeersmodellen, zoals deze zijn opgesteld door Haskoning en verstrekt door de gemeente Barneveld als 'shape-bestanden'. In de verkeersgegevens voor de autonome situatie en de situatie na planrealisatie is rekening gehouden met alle 'harde plannen' en de autonome verkeersgroei.

Voor de verkeersgegevens van de rijksweg A1 en de provinciale weg N303, is uitgegaan van de gegevens zoals door Rijkswaterstaat beschikbaar gesteld via de centrale voorziening geluidgegevens.

In bijlage 1 zijn de verkeersgegevens gegeven. Bussen zijn meegenomen in de cijfers voor het middelzwaar verkeer. Voor het onderzoek is uitgegaan van de volgende verkeersgegevens:

- toekomstig jaar 2040, autonome situatie zonder planontwikkeling;
- toekomstig jaar 2040, autonome situatie met planontwikkeling.

Omdat de achtergrondconcentraties van de verschillende onderzochte stoffen vaak maatgevend zijn voor de berekende resultaten, zijn de berekeningen uitgevoerd met de achtergrondconcentraties voor de jaren 2026, 2030 en 2035 en de verkeersgegevens voor de beide situaties in 2040. Hierdoor wordt er per jaar een worst-case berekening uitgevoerd.

De berekeningen zijn uitgevoerd volgens standaardrekenmethode 1 en 2, zoals bedoeld in bijlage XIXa van de Omgevingsregeling. Daarbij is gebruik gemaakt van het softwarepakket GeoMilieu versie 2025.2 (Programmapakket Nieuw Nationaal Model voor de verspreiding van luchtverontreiniging, met als rekenhart Kema STACKS+).

Met behulp van dit programma zijn concentraties op leefniveau berekend, waarbij is uitgegaan van de meest recente achtergrondconcentraties, snelweg dubbeltellingcorrecties, meteorologie en emissiefactoren, welke jaarlijks door de Rijksoverheid ter beschikking worden gesteld. Deze rekenmethode is conform bijlage XIXa van de Omgevingsregeling.

Opmerking: in het gebruikte model wordt automatisch op basis van invoerparameters, de bijpassende rekenmethode toegepast. De invoergegevens van dit rekenprogramma zijn overeenkomstig het rekenprogramma dat gebruikt is voor verkeerslawaaiberekeningen voor deze locatie (zie rapport 2300200.R01). In de figuren 2.1 t/m 3 en in de bijlagen 1 zijn de relevante invoergegevens weergegeven.

## 5 BEOORDELING LUCHTKWALITEIT TER PLAATSE VAN PLANGEBIED EN BESTAANDE WONINGEN

In het kader van een evenwichtige toedeling van functies aan locaties is de luchtkwaliteit ter plaatse van de nieuwe en bestaande bestemmingen (woningen) verder onderzocht en berekend.

Een volledig overzicht van de resultaten is opgenomen in bijlage 2 t/m 6. Hierna zijn de hoogste concentraties opgenomen ter plaatse van de volgende maatgevende locaties:

- toekomstig plangebied – 'Woonwerklandschap' ter plaatse van de maatgevende nieuwe woningen (rekenpunten 001 t/m 155);
- bestaande woningen onder andere langs de Oosterdorpsstraat en Koninginneweg (rekenpunten b.001 t/m b.W02).

### Stikstofdioxide (NO<sub>2</sub>)

In tabel 1 is per onderzochte situatie en per locatie telkens de hoogst berekende jaargemiddelde NO<sub>2</sub> concentratie weergegeven. Detailinformatie is te vinden in bijlage 2 t/m 6.

Tabel 1: Hoogst berekende jaargemiddelde concentratie NO<sub>2</sub> per situatie en per locatie in µg/m<sup>3</sup>

| Locatie<br>(rekenpunten zie figuur 3 en bijlage 2 t/m 6) | Situatie          |               |                        |               |                        |
|----------------------------------------------------------|-------------------|---------------|------------------------|---------------|------------------------|
|                                                          | 2026 *)<br>huidig | 2030/40 *)    |                        | 2035/40 *)    |                        |
|                                                          |                   | Auto-<br>noom | Na plan-<br>realisatie | Auto-<br>noom | Na plan-<br>realisatie |
| Nieuw: Planlocatie – Woonwerklandschap - (001 t/m 155)   | 9.57              | 7.93          | 7.96                   | 6.17          | 6.19                   |
| Bestaande bestemmingen - (b.001 t/m b.W02)               | 9.57              | 7.93          | 7.94                   | 6.17          | 6.18                   |

\*) : Rekenjaren en achtergrondconcentraties van 2026, 2030 en 2035 en verkeersprognoses voor het jaar 2040; hetgeen een worstcase benadering is.

Uit tabel 1 blijkt dat zowel in de huidige situatie als in de situaties zonder en na planrealisatie, de berekende concentraties ten gevolge van het verkeer op de wegen ruim lager zijn dan de omgevingswaarde van 40 µg/m<sup>3</sup>.

Ook zijn de concentraties in 2030 en 2035:

- lager dan de advieswaarde van 40 µg/m<sup>3</sup>, waarmee voldaan wordt aan het Schone Lucht Akkoord;
- lager dan 20 µg/m<sup>3</sup>, waarmee voldaan wordt aan de aangescherpte Europese richtlijn.

#### Fijnstof (PM<sub>10</sub>)

In tabel 2 is per onderzochte situatie en per locatie telkens de hoogst berekende jaargemiddelde PM<sub>10</sub> concentratie weergegeven. Detailinformatie is te vinden in bijlage 2 t/m 6.

Tabel 2: Hoogst berekende jaargemiddelde concentratie PM<sub>10</sub> per situatie en per locatie in µg/m<sup>3</sup>

\*) : Rekenjaren en achtergrondconcentraties van 2026, 2030 en 2035 en verkeersprognoses voor het jaar 2040; hetgeen een worstcase benadering is.

Uit tabel 2 blijkt dat zowel in de huidige situatie als in de situaties zonder en na planrealisatie, de berekende concentraties ten gevolge van het verkeer op de wegen ruim lager zijn dan de omgevingswaarde van 40 µg/m<sup>3</sup>. Ook zijn de concentraties in 2030 en 2035:

- lager dan de advieswaarde van 20 µg/m<sup>3</sup>, waarmee voldaan wordt aan het Schone Lucht Akkoord;
- lager dan 20 µg/m<sup>3</sup>, waarmee voldaan wordt aan de aangescherpte Europese richtlijn.

#### Zeer fijnstof (PM<sub>2,5</sub>)

In tabel 3 is per onderzochte situatie en per locatie telkens de hoogst berekende jaargemiddelde PM<sub>2,5</sub> concentratie weergegeven. Detailinformatie is te vinden in bijlage 2 t/m 6.

Tabel 3: Hoogst berekende jaargemiddelde concentratie PM<sub>2,5</sub> per situatie en per locatie in µg/m<sup>3</sup>

| Locatie<br>(rekenpunten zie figuur 3 en bijlage 2 t/m 6) | Situatie          |               |                        |               |                        |
|----------------------------------------------------------|-------------------|---------------|------------------------|---------------|------------------------|
|                                                          | 2026 *)<br>huidig | 2030/40 *)    |                        | 2035/40 *)    |                        |
|                                                          |                   | Auto-<br>noom | Na plan-<br>realisatie | Auto-<br>noom | Na plan-<br>realisatie |
| Nieuw: Planlocatie – Woonwerklandschap - (001 t/m 155)   | 8.60              | 7.48          | 7.48                   | 6.61          | 6.61                   |
| Bestaande bestemmingen - (b.001 t/m b.W02)               | 8.60              | 7.48          | 7.48                   | 6.61          | 6.61                   |

\*) : Rekenjaren en achtergrondconcentraties van 2026, 2030 en 2035 en verkeersprognoses voor het jaar 2040; hetgeen een worstcase benadering is.

Uit tabel 3 blijkt dat zowel in de huidige situatie als in de situaties zonder en na planrealisatie, ten gevolge van het verkeer op de wegen, de concentraties ruim lager zijn dan de omgevingswaarde van 25 µg/m<sup>3</sup>.

Ook zijn de concentraties in 2030 en 2035:

- lager dan de advieswaarde van 10 µg/m<sup>3</sup>, waarmee voldaan wordt aan het Schone Lucht Akkoord;
- lager dan 10 µg/m<sup>3</sup>, waarmee voldaan wordt aan de aangescherpte Europese richtlijn.

#### Elementair Koolstof (EC)

In tabel 4 is per onderzochte situatie en per locatie telkens de hoogst berekende jaargemiddelde EC-concentratie weergegeven. Detailinformatie is te vinden in bijlage 2 t/m 6.

Tabel 4: Hoogst berekende jaargemiddelde concentratie EC per situatie en per locatie in µg/m<sup>3</sup>

\*) : Rekenjaren en achtergrondconcentraties van 2026, 2030 en 2035 en verkeersprognoses voor het jaar 2040; hetgeen een worstcase benadering is.

Voor elementair koolstof is geen omgevingswaarde vastgesteld. Wel blijkt uit tabel 4 dat in de toekomstige situatie zonder en na planrealisatie, de berekende concentraties ten gevolge van het verkeer op de wegen gelijk zijn.

## 6 SAMENVATTING EN CONCLUSIE

In het kader van het TAM-omgevingsplan voor het plan 'Woonwerklandschap Voorthuizen' is een onderzoek naar de luchtkwaliteit uitgevoerd. De ontwikkeling in het zuidwesten van Voorthuizen voorziet in de realisatie van woningen en bedrijven. Er is een onderzoek luchtkwaliteit uitgevoerd naar de emissies van stikstofdioxide ( $\text{NO}_2$ ), fijnstof ( $\text{PM}_{10}$  en  $\text{PM}_{2,5}$ ) en elementair koolstof (EC). Het doel van het onderzoek is nagaan of aan de relevante omgevingswaarden voor de kwaliteit van de buitenlucht wordt voldaan.

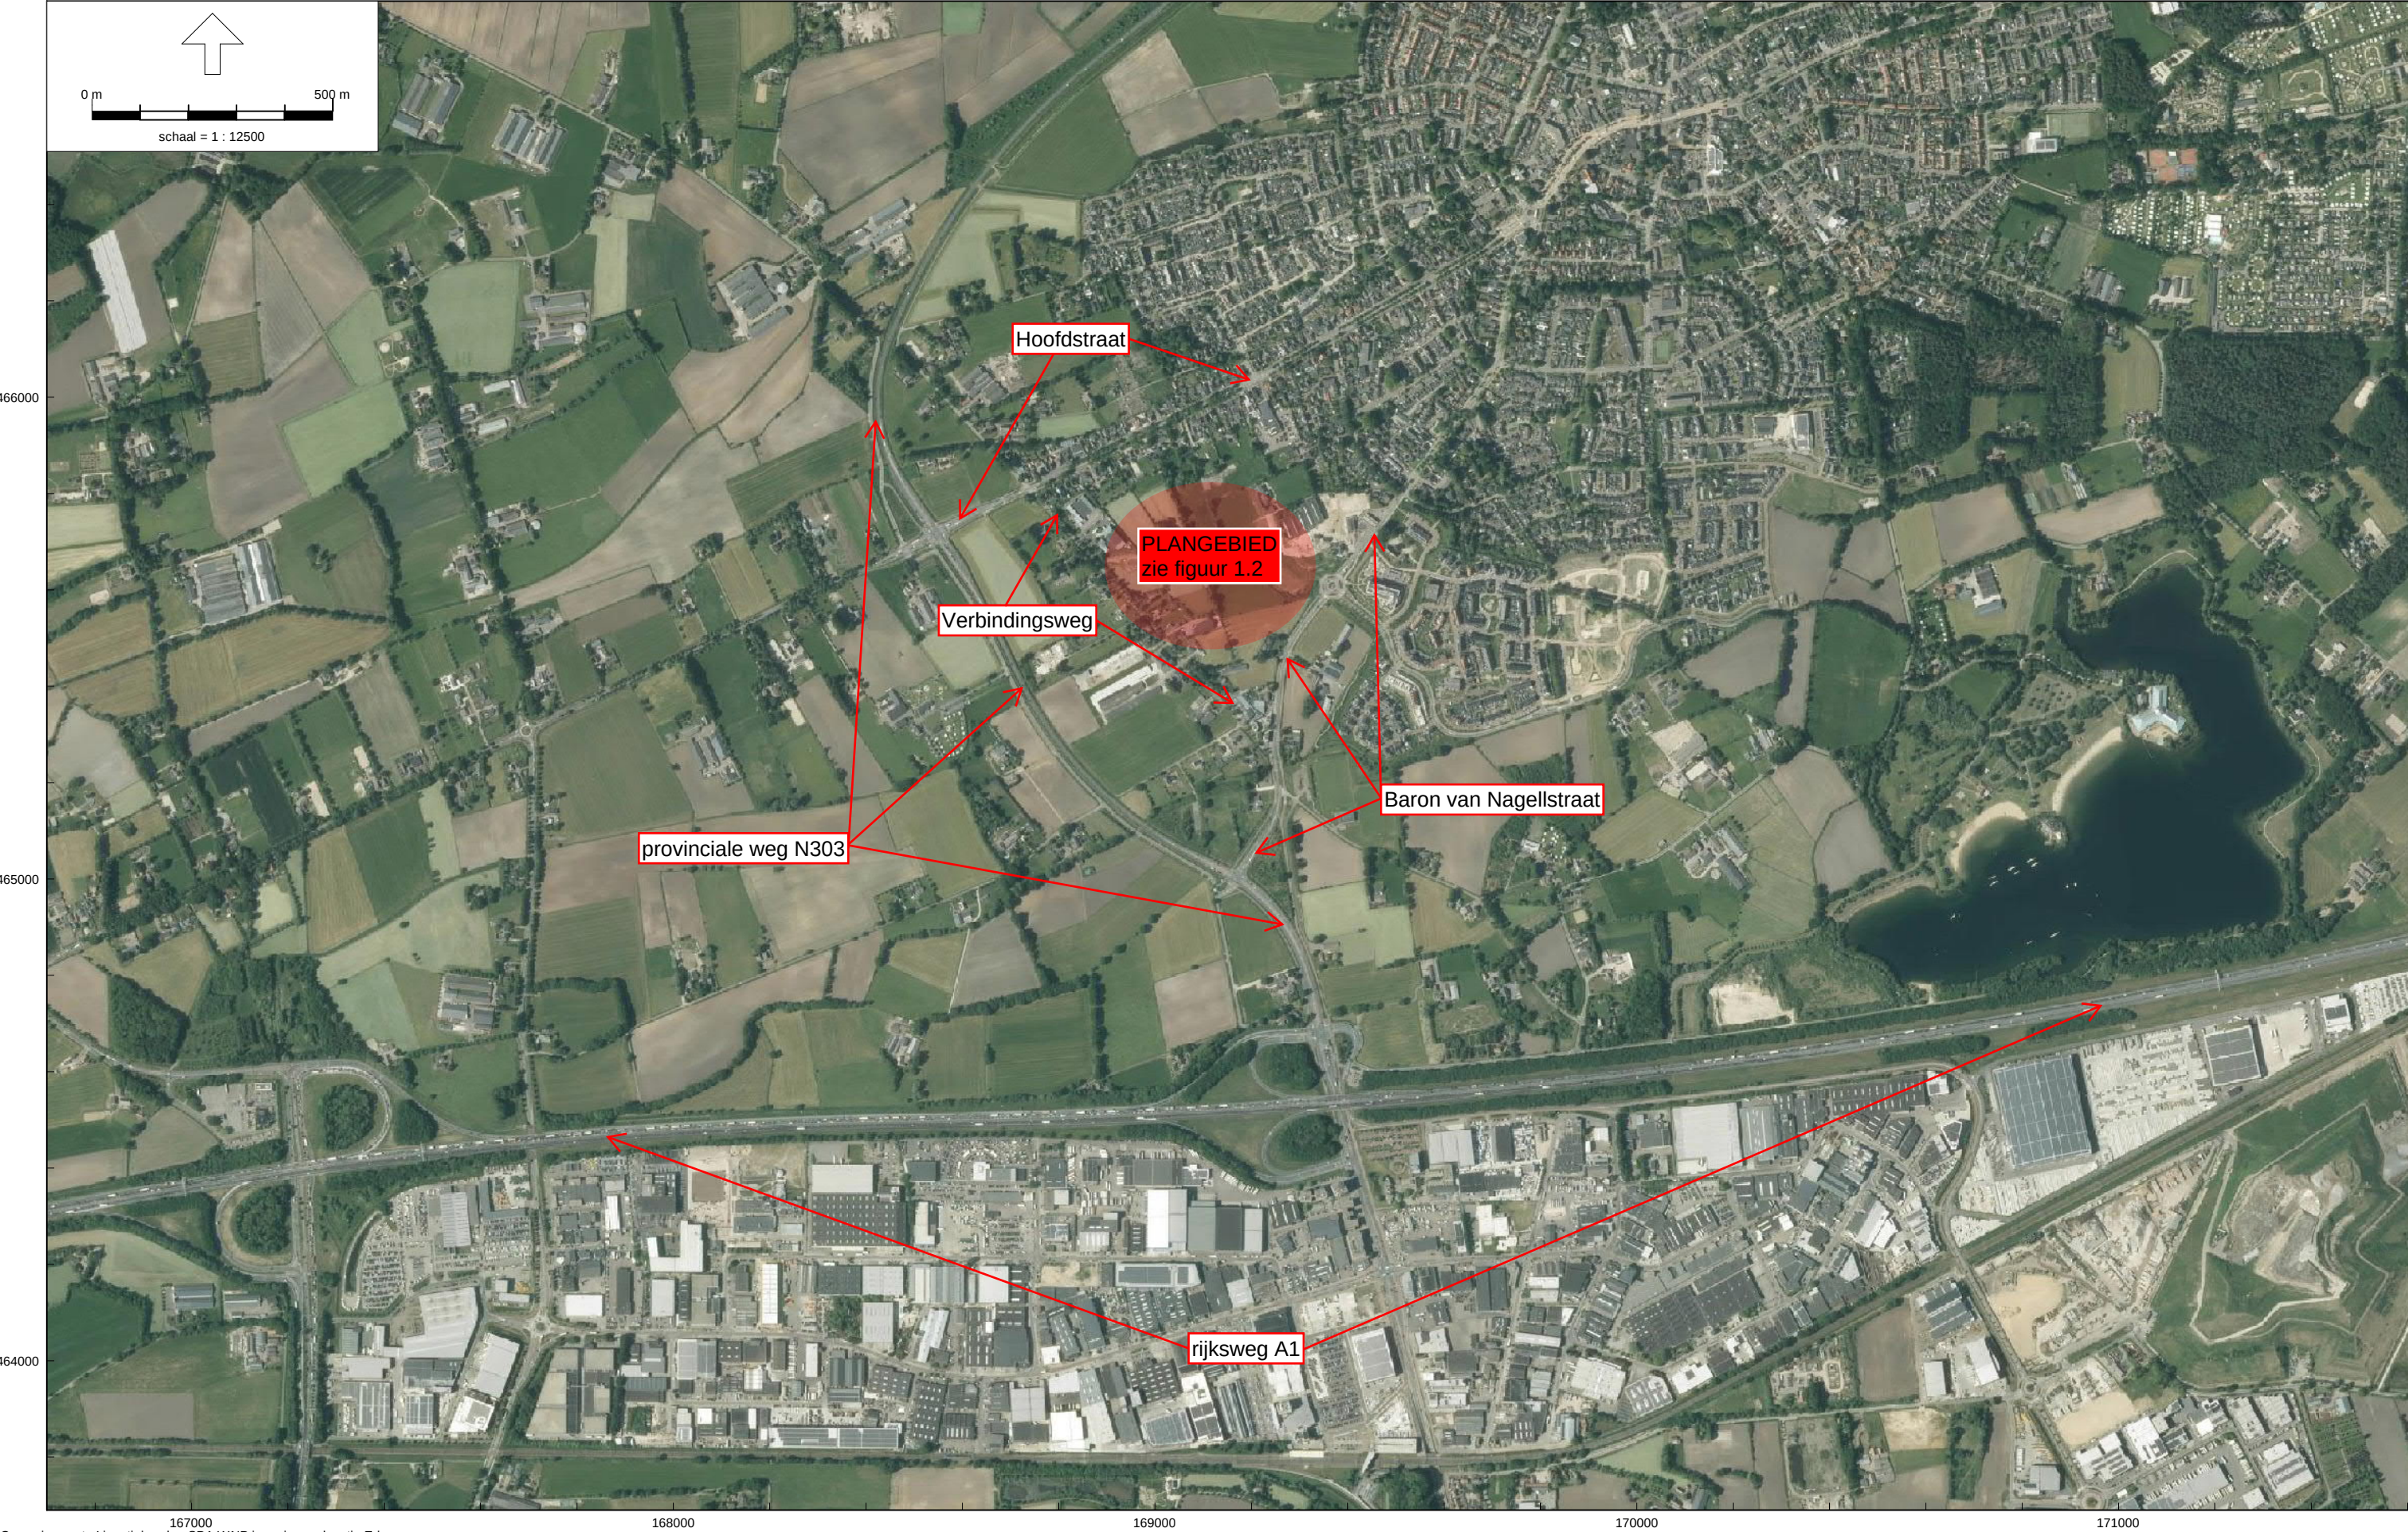

In het kader van een evenwichtige toedeling van functies aan locaties is de luchtkwaliteit ter plaatse van de nieuwe en bestaande woningen onderzocht en berekend. Hieruit blijkt dat zowel in de huidige situatie, als in de toekomstige situaties (autonome situatie) zonder en na planrealisatie, de berekende concentraties ten gevolge van het verkeer op de wegen ruim lager zijn dan de omgevingswaarden. Ook wordt aan de advieswaarden uit het Schone Lucht Akkoord en aan de aangescherpte Europese richtlijn voldaan.

Samenvattend wordt geconcludeerd dat het aspect luchtkwaliteit geen belemmering voor de gewenste ruimtelijke ontwikkeling vormt.
