## 1 Inleiding

In opdracht van Lycens B.V heeft Akoestisch Buro Tideman een akoestisch onderzoek verricht ten behoeve van een plan gelegen aan de Kerkstraat 28 te Kerkdriel. In figuur 1 en 2 is de locatie weergegeven. Initiatiefnemer is voornemens om op het perceel één grondgebonden woning te realiseren. Om de bouw van het plan mogelijk te maken is een aanpassing nodig van het bestemmingsplan.

Het plan ondervindt een geluidbelasting door het wegverkeer vanaf de Kerkstraat en de omliggende woonstraten. Het plan ligt binnen de zone van de Kerkstraat. De Kerkstraat kent ter plaatse van deze woning een 30 km regime. Meer richting het westen gaat deze Kerkstraat over van een 30 km zone naar een ruisnelheid van 50 km per uur. Alle overige wegen zijn wegen zonder zone met een ruisnelheid van 30 km/u.

Om de wijziging mogelijk te maken, moet er inzicht worden verkregen in de geluidbelasting op het plan door het wegverkeerslawaai.

Het voorliggend akoestisch onderzoek heeft betrekking op de geluidbelasting door wegverkeer binnen zones langs wegen zoals bedoeld in de Wet geluidhinder. Het doel van het akoestisch onderzoek is het berekenen en het toetsen van de geluidsbelasting afkomstig van het wegverkeer. Volgens de Wet geluidhinder moeten hierin toekomstige ontwikkelingen worden betrokken. De geluidbelasting moet worden bepaald in het maatgevend jaar dat is vastgesteld op het tiende jaar na het onderzoek, in dit geval 2032. De geluidbelasting kan, mede om deze reden, alleen rekenkundig worden vastgesteld.

Aan de hand van de bekende omgevingskenmerken en de verkeersintensiteiten kan de geluidbelasting worden berekend. Hierbij is gebruik gemaakt van de Standaard Rekenmethode II zoals beschreven in het "Reken- en meetvoorschrift geluidhinder 2012, Bijlage III" uit 2012 (afgekort met RMW-2012). Per weg dient de berekende geluidbelasting te worden getoetst aan de richtwaarden genoemd in de Wet Geluidhinder.

De geluidsbelasting wordt getoetst aan de streef- en grenswaarden uit de Wet geluidhinder. Toetsing vindt plaats op basis van een 'nieuwe situatie', waarbij 48 dB de voorkeurs-grenswaarde is voor wegverkeerslawaai.

In dit rapport worden de situatie, de relevante onderdelen van de Wet geluidhinder en de rekenresultaten toegelicht. Vervolgens wordt een conclusie gegeven.

## 2 Geraadpleegde bronnen

Bij het onderzoek is gebruik gemaakt van de volgende gegevens:

- Situatie en kadastrale informatie opgenomen als figuur 1;
- Website Actueel Hoogtebestand Nederland;
- Verkeersgegevens verstrekt door de gemeente Maasdriel;
- Standaard Rekenmethode II uit het Reken- en Meetvoorschrift Geluidhinder (RMG2012). Gerekend is met het programma GEOMILIEU, versie 2022-4.

### 3 Wet Geluidhinder

#### 3.1 ALGEMEEN

Als een gemeentebestuur via het bestemmingsplan de bouw van geluidsgevoelige bestemmingen mogelijk maakt, is er sprake van een 'nieuwe situatie' in de zin van de Wet geluidhinder. Indien een geluidsgevoelige bestemming, zoals een woning die binnen de geluidszone van een weg wordt geprojecteerd, moet een akoestisch onderzoek uitgevoerd worden naar de geluidsbelasting afkomstig van die weg.

#### 3.2 WEGVERKEERSLAWAAI

In de Wet Geluidhinder is bepaald dat iedere weg een geluidszone heeft. Een zone is in feite een akoestisch aandachtsgebied. De breedte van de zone wordt bepaald door het aantal rijstroken en de ligging van de weg in stedelijk of buitenstedelijk gebied. Het binnen- en buitenstedelijk gebied is als volgt gedefinieerd:

- buitenstedelijk: het gebied buiten de bebouwde kom en het gebied (binnen en buiten de bebouwde kom) binnen de zone van een autoweg of autosnelweg;
- binnenstedelijk: het gebied binnen de bebouwde kom met uitzondering van de gebieden binnen de zone van een autoweg of autosnelweg.

De volgende wegen zijn echter vrijgesteld van een zone:

- wegen, die liggen binnen een woonerf;
- wegen, waarvoor een maximumsnelheid geldt van 30 km/uur.

De vraag of een perceel al dan niet binnen de bebouwde kom ligt is van feitelijke aard. Niet de plaats van het verkeersbord dat de bebouwde kom aangeeft, is bepalend, maar de aard van de omgeving.

De geluidszone ligt aan weerszijden van de weg. Aan het uiteinde van een weg loopt de zone door over een afstand gelijk aan de zonebreedte, met de breedte die zij had aan het einde van de weg. Bij verschillende zonebreedten van één weg, loopt het breedste zonedeel door over een derde van de grootste zone-afstand en sluit dan met een loodlijn aan op de kleinere zone. Het akoestisch onderzoek richt zich op de te verwachten geluidbelasting op de geluidsgevoelige bestemmingen in de geluidszone.

Volgens Artikel 74 lid 1 van de Wet Geluidhinder heeft een weg een zone die zich uitstrek vanaf de as van de weg tot de volgende breedte aan weerszijden van de weg:  
a.in stedelijk gebied:

- 1°. voor een weg, bestaande uit een of twee rijstroken of een of twee sporen: 200 meter;
- 2°. voor een weg, bestaande uit drie of meer rijstroken of drie of meer sporen: 350 meter;

b.in buitenstedelijk gebied:

- 1°. voor een weg, bestaande uit een of twee rijstroken of een of twee sporen: 250 meter;
- 2°. voor een weg, bestaande uit drie of vier rijstroken of drie of meer sporen: 400 meter;
- 3°. voor een weg, bestaande uit vijf of meer rijstroken: 600 meter.

De voorkeursgrenswaarde voor de geluidsbelasting afkomstig van wegverkeer bedraagt voor nieuwe woningen 48 dB. In bepaalde gevallen mogen hogere waarden worden toegepast. De maximaal toegestane waarde bedraagt 63 dB in stedelijk en 53 dB in buitenstedelijk gebied. Bij vervangende bouw liggen deze maxima 5 dB hoger.

Vanwege de verwachting dat het wegverkeer op middellange termijn stiller wordt (betere uitlaat/stillere motoren), wordt op grond van artikel 110 g van de Wet geluidhinder een aftrek op de rekenresultaten toegestaan alvorens te toetsen aan de wettelijke waarden. Deze aftrek bedraagt 5 dB voor wegen waarop met een snelheid van minder dan 70 km/uur wordt gereden.

Voor wegen waar de representatieve snelheid voor lichte motorvoertuigen 70 km/uur of meer bedraagt, bedraagt de aftrek op basis van artikel 110g Wgh (art. 3.4, lid 1):

- 4 dB voor situaties dat de geluidsbelasting zonder aftrek 110g Wgh 57 dB is.
- 3 dB voor situaties dat de geluidsbelasting zonder aftrek 110g Wgh 56 dB is;
- 2 dB voor andere waarden van de geluidsbelasting en 2 dB of meer voor wegen waarop 70 km/uur of meer wordt gereden.

Bij toetsing aan het Bouwbesluit bedraagt de aftrek 0 dB.

Indien een hogere waarde wordt toegepast, moet door middel van een gevelisolatieberekening worden aangetoond dat de geluidsbelasting binnen de woning de maximaal toelaatbare waarde niet overschrijdt. Bij een nieuwe woning maakt de gevelisolatieberekening onderdeel uit van de bouwaanvraag.

## 4 Gegevens voor de berekeningen

Voor het uitvoeren van de berekeningen zijn de volgende gegevens nodig:

- uurintensiteiten van de diverse categorieën van het verkeer;
- de verkeerssnelheden;
- de situering van het te onderzoeken pand ten opzichte van de omliggende wegen en bebouwing;
- het type wegdek
- de invloed van de bodem op de geluidsoverdracht.

De gegevens dienen bepaald te zijn voor de toestand zoals die is te verwachten minimaal 10 jaar na het opstellen van het rapport, in dit geval voor het jaar 2032.

De berekeningen zijn uitgevoerd met behulp van Standaard Rekenmethode II uit het Reken- en Meetvoorschrift Geluidhinder. Gerekend is met het programma GEOMILIEU, versie 2022-4.

### 4.1 VERKEERSGEGEVENS

De verkeersgegevens zijn verstrekt door de gemeente Maasdriel via een weblink waarbij de verkeersdata kan worden gedownload voor het softwarepakket GeoMilieu.

De gegevens zijn verstrekt voor het jaar 2030. Er is uitgegaan van een groeipercentage van 1% per jaar tot het jaar 2032. De volgende verkeersgegevens van de Kerkstraat zijn gebruikt voor het bepalen van de geluidbelasting:

#### Kerkstraat van oost naar west

Gemiddelde uurverdeling per categorie per periode

| Categorie            | Dag    | Avond  | Nacht  | Totaal |
|----------------------|--------|--------|--------|--------|
| Uurintensiteit [%]   | 6.63   | 3.53   | 0.79   | 100.00 |
| Motorfietsen [%]     | --     | --     | --     |        |
| Lichte mvtg [%]      | 92.29  | 95.80  | 90.35  |        |
| Middelzware mvtg [%] | 4.72   | 2.51   | 5.15   |        |
| Zware mvtg [%]       | 2.99   | 1.69   | 4.50   |        |
| Totaal [%]           | 100.00 | 100.00 | 100.00 |        |

Etmaalintensiteit  
2878.66

#### Kerkstraat van west naar oost

Gemiddelde uurverdeling per categorie per periode

| Categorie            | Dag    | Avond  | Nacht  | Totaal |
|----------------------|--------|--------|--------|--------|
| Uurintensiteit [%]   | 6.63   | 3.53   | 0.79   | 100.00 |
| Motorfietsen [%]     | --     | --     | --     |        |

Etmaalintensiteit  
3062.34

De wegdek verharding bestaat uit asfalt (DAB). De rijnsnelheid bedraagt 30 km/u.

Voor de overige verkeersgegevens wordt verwezen naar bijlage 1 in combinatie met figuur 3-3.

### 4.2 OVERIGE INVOERGEGEVENS

In bijlage 1 zijn de invoergegevens opgenomen van het rekenmodel. Er is gerekend met een compacte ondergrond (standaard bodemfactor 0.7) en een volledig harde ondergrond voor de wegen. In de figuren 3 is een weergave opgenomen van het rekenmodel met de objecten en bodembieden.

## 5 Berekeningsresultaten

De geluidbelasting op het plan is bepaald op 6 rekenpunten op een hoogte van 2.5, 5 en 7.5 meter. De ligging van de waarneempunten is weergegeven in figuur 3-3.

In figuur 4-1 is de geluidbelasting opgenomen als gevolg van het verkeer over alle wegen zonder aftrek ex artikel 110G van 5 dB. De geluidbelasting bedraagt maximaal 59 dB op de voorgevel van de woning.

In figuur 4-2 is de geluidbelasting opgenomen als gevolg van het verkeer over de Kerkstraat voor het deel met een rijsnelheid van 50 km/u. De aan de voorkeursgrenswaarde te toetsen geluidbelasting bedraagt 41 dB.

De geluidbelasting op het plan is ter plaatse van de woning lager dan de voorkeursgrenswaarde van 48 dB. Er wordt voldaan aan de voorkeursgrenswaarde uit de Wet Geluidhinder.

Bij deze woning hoeft geen hogere waarde te worden vastgesteld omdat deze woningen niet worden belast door een zoneplichtige weg.

De cumulatieve geluidbelasting is wel hoger dan 53 dB en bedraagt maximaal 59 dB. Om te voldoen aan een goed woon- en leefklimaat zal ook de geluidwering van deze woningen minimaal  $G_a;k=26$  dB moeten bedragen.

## 6 Conclusie

In opdracht van Lycens B.V heeft Akoestisch Bureau Tideman een akoestisch onderzoek verricht ten behoeve van een plan gelegen aan de Kerkstraat 28 te Kerkdriel. Om het plan mogelijk te maken is een aanpassing nodig van het bestemmingsplan.

De geluidbelasting wordt bepaald door het wegverkeer over de Kerkstraat en bedraagt maximaal 59 dB. Uit de toetsing blijkt dat voor het wegverkeerslawaai wordt voldaan aan de voorkeursgrenswaarde genoemd in de Wet Geluidhinder van 48 dB. De reden dat wordt voldaan is omdat de Kerkstraat direct voor deze woning een 30 km/u regime kent en daarmee niet zoneplichtig is. Het weggedeelte dat verder is gelegen en een ridsnelheid kent van 50 km/u moet wel worden getoetst aan de voorkeursgrenswaarde. Dit weggedeelte leidt tot een geluidbelasting lager dan de voorkeurswaarde vanwege de grotere afstand.

Bij deze woning hoeft geen hogere waarde te worden vastgesteld omdat deze woningen niet worden belast door een zoneplichtige weg.

De cumulatieve geluidbelasting is wel hoger dan 53 dB en bedraagt maximaal 59 dB. Om te voldoen aan een goed woon- en leefklimaat zal ook de geluidwering van deze woningen minimaal  $G_{A;K}=26$  dB moeten bedragen.

Bij de aanvraag van de omgevingsvergunning Bouwen moet een akoestisch onderzoek worden gevoegd waaruit blijkt met welke bouwkundige voorzieningen kan worden voldaan aan de eisen aanziend van de geluidwering van de gevel.
