Slagschaduw van WP Rijnenburg op BP Papendorp en BP Groenewoud

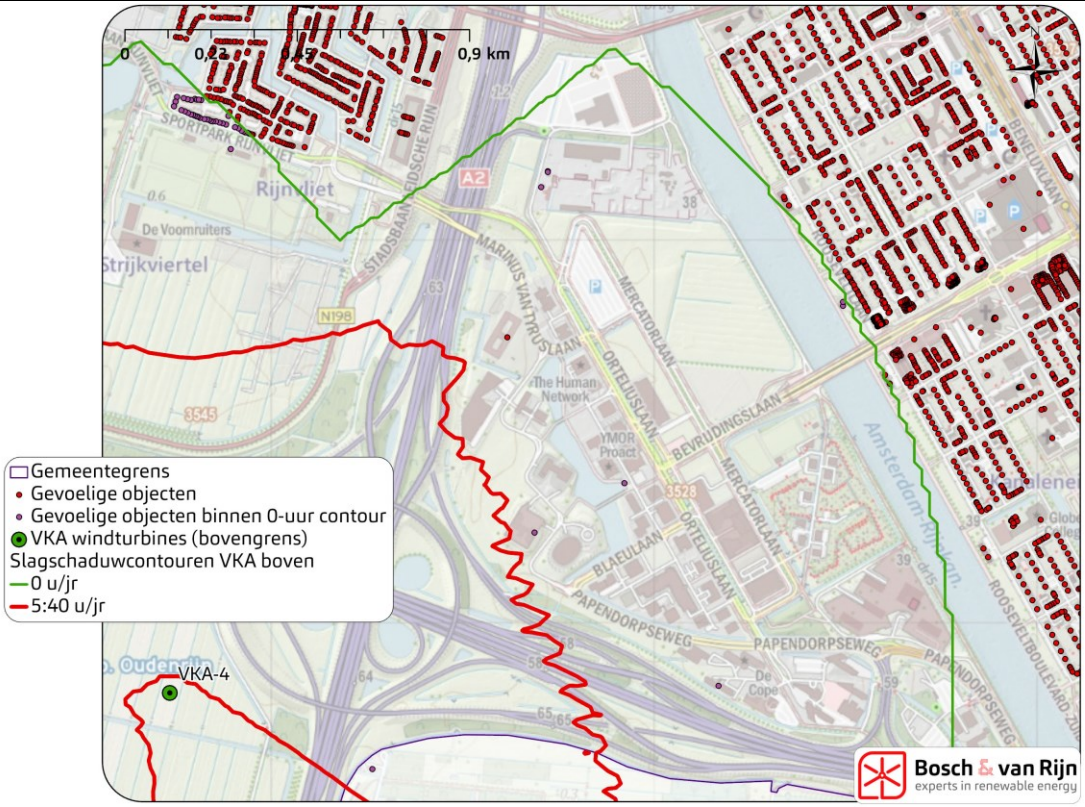
Datum 19 april 2024

Auteur [redacted]

Inleiding

Gelijktijdig met de voorbereiding van het Bestemmingsplan Windpark Rijnenburg & Reijerscop heeft de gemeente Utrecht twee bestemmingsplannen in de omgeving voorbereid. Het betreft Chw bestemmingsplan Papendorp en Chw bestemmingsplan Groenewoud, waarin onder meer woningen en kantoren mogelijk worden gemaakt.
Omdat de plangebieden (grotendeels) binnen de 0u-slagschaduwcontour liggen kan bewegende slagschaduw van de windturbines reiken tot de daarin gelegen kantoren en woningen. Dit memo brengt de hoeveelheid slagschaduw in beeld. De windturbines moeten voldoen aan strenge (lokale) normen op het gebied van slagschaduw. De aanvullende verwachte jaarlijkse stilstand die deze nieuwe bestemmingsplannen met zich meebrengen is ook inzichtelijk gemaakt.

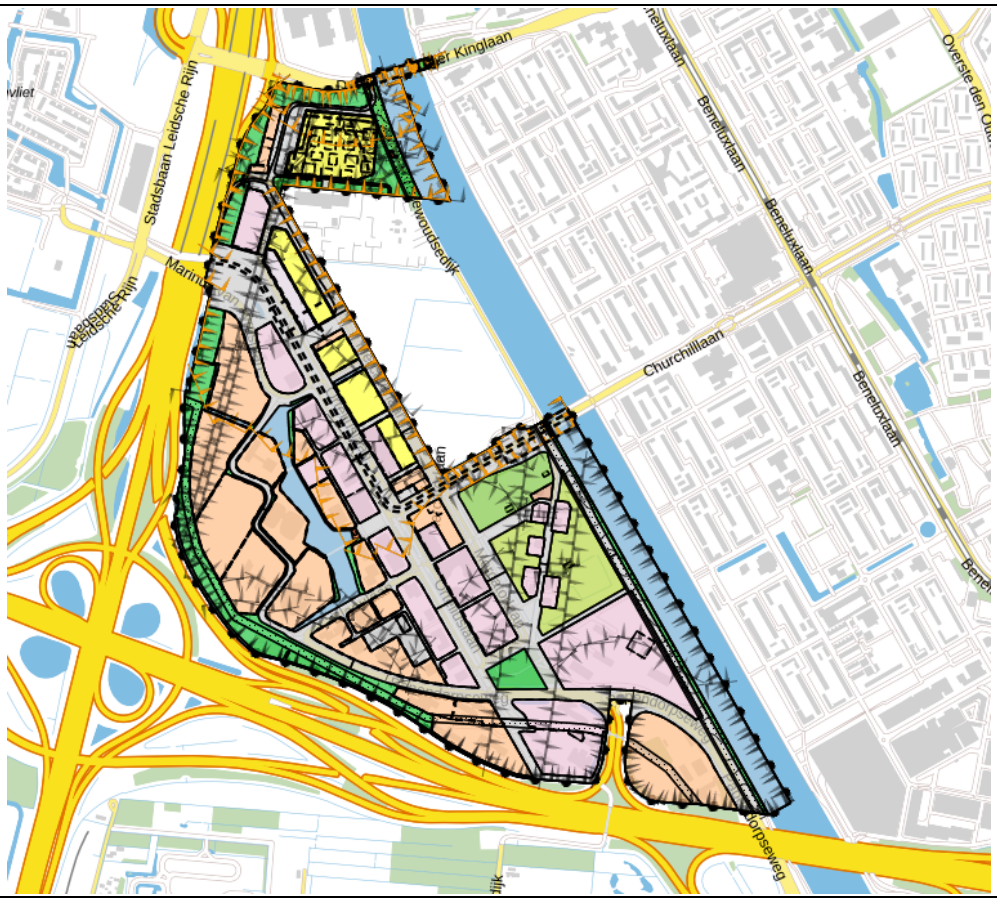
Figuur 1 **Slagschaduwcontouren ter plaatse van de bestemmingsplannen Papendorp en Groenewoud.**



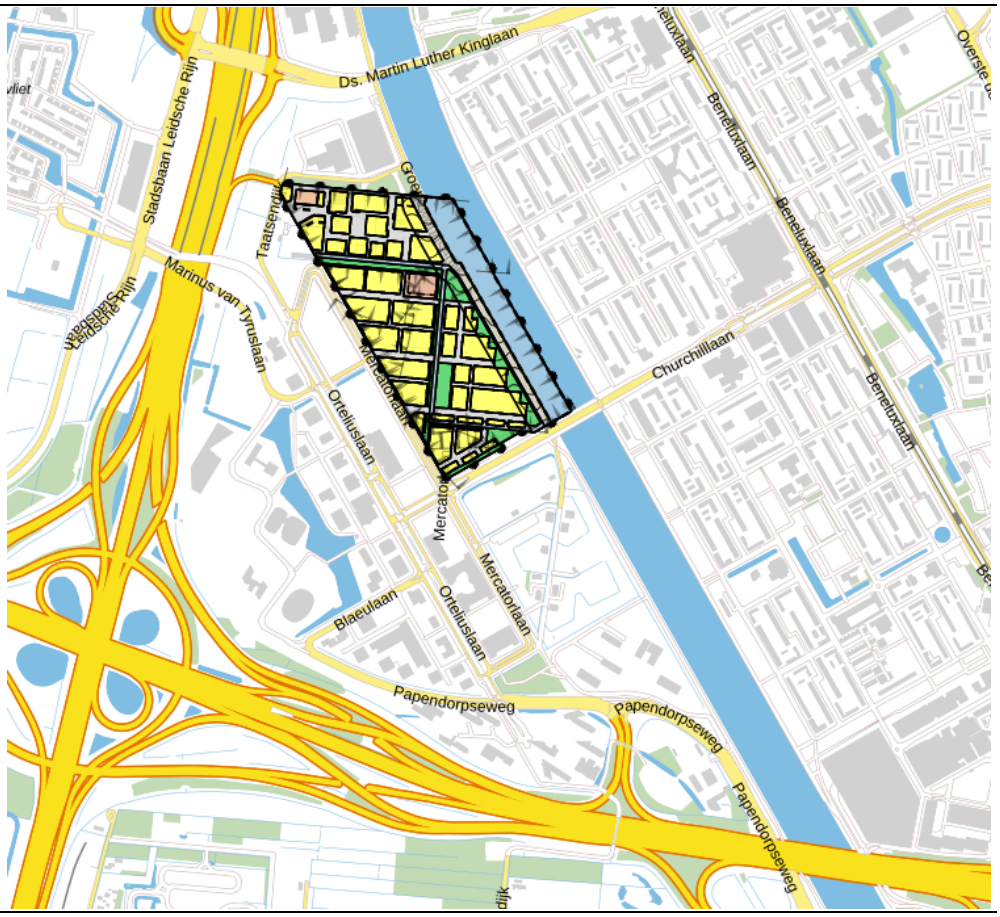
Voor gevoelige objecten (zoals woningen) geldt dat er geen hinderlijke slagschaduw mag optreden. Door beide bestemmingsplannen neemt daardoor de jaarlijkse stilstand van de windturbine(s) toe.
Voor kantoren geldt dat jaarlijks 5 uur en 40 minuten slagschaduw per kantoor mag optreden binnen kantoortijden tijdens weekdagen. Eventuele aanvullende stilstand

kan dus enkel worden veroorzaakt door dat deel van BP Papendorp dat binnen de 5:40 uur-contour ligt (rode lijn in Figuur 1).

Figuur 2 **BP Papendorp, met ruimte voor woningen (geel), kantoren (paars), zelfstandige of onzelfstandige kantoren (lichtbruin) en maatschappelijk (donker bruin), waar eventueel gevoelige objecten gerealiseerd kunnen worden, zoals een kinderdagverblijf). In een groot deel van de paarse vlakken zijn in de bestaande situatie al kantoren aanwezig. Voor de lichtbruine vlakken geldt dat ook, alleen gaat het dan om onzelfstandige kantoren (Gemengd – 2) Enkele lichtbruine vlakken bieden naast kantoren ook ruimte voor woningen. Deze zijn in beide berekeningen meegenomen. Het gaat om enkelbestemming Gemengd-1 en Gemengd-3.**



Figuur 3 **BP Groenewoud. De gele vlakken zijn als woning gemodelleerd en maatschappelijk (donker bruin), waar eventueel gevoelige objecten gerealiseerd kunnen worden, zoals een kinderdagverblijf.**



Slagschaduw op gevoelige objecten

De lokale norm voor hinderlijke slagschaduw van windturbines, opgenomen als voorwaardelijke verplichting in de planregels van BP Windpark Rijnenburg & Reijerscop, zorgt ervoor dat de windturbines stilgezet moeten worden als hinderlijke slagschaduw dreigt te vallen op gevoelige objecten.

De stilzettijd van de windturbines van windpark Rijnenburg & Reijerscop om ook alle slagschaduw op gevoelige objecten in de nieuwe bestemmingsplannen te voorkomen is in onderstaande tabel vergeleken met de stilzettijd zonder deze gevoelige objecten[1].

Windturbine	Slagschaduw op gev. obj. per windturbine, zonder BP Papendorp en Groenewoud	Slagschaduw op gev. obj. per windturbine, incl. BP Papendorp en Groenewoud	Toename (uu:mm)
1	101:29	101:29	-
2	93:13	93:13	-
3	103:05	103:05	-
4	103:14	115:47	12:33
Som	**401:01**	**413:34**	**12:33**

[1] Overgenomen van tabel 1 uit de 'Oplegnotitie Slagschaduw windpark Rijnenburg en Reijerscop'.

De *toename* van de stilzettijd is dus **12:33** uur per jaar. Alleen de meest oostelijke windturbine veroorzaakt slagschaduw op de gevoelige objecten in Papendorp en Groenewoud. Dit volgt uit een berekening waarin de relevante vlakken (waar gevoelige objecten gerealiseerd kunnen worden) in bestemmingsplan Groenewoud en in bestemmingsplan Papendorp zijn ingevoerd. Zie bijlage 1 voor de rekenresultaten. Deze bijlage laat ook zien hoeveel slagschaduw er (zonder stilstand) jaarlijks op de gevoelige objecten in beide bestemmingsplannen zou vallen: 15:57 u/jr voor Groenewoud en 20:16 u/jr voor Papendorp. Het lijkt tegenstrijdig dat de slagschaduw per plangebied hoger is dan de toename van de benodigde stilzettijd. De toename valt echter lager uit. Dat wordt veroorzaakt door het gegeven dat er al gevoelige objecten en kantoren in en nabij de plangebieden staan, die al tot stilstand leiden (zo laten eerdere berekeningen zien). Daarnaast zal voor de beide bestemmingsplannen vaak gelden dat stilzetten van de windturbine effect heeft op de slagschaduw op beide plangebieden.

Uitgaande van 8.307 draaiuren per windturbine per jaar (omdat het de overige uren niet hard genoeg waait om de windturbines te laten draaien) betekent deze uitbreiding een toename van de opbrengstderving van 0,04%. Een dergelijk geringe (extra) opbrengstderving brengt de economische uitvoerbaarheid van het windpark niet in gevaar.

Slagschaduw op kantoren

Voor kantoren is de berekening *inclusief* de nieuwe kantoorbestemmingen (enkelbestemming Kantoor en Gemengd-1, -2 en -3) vergeleken met de oorspronkelijke berekening van slagschaduw op kantoren door maatgevende toetspunten te plaatsen op de vlakhoek die het dichtst bij de windturbines ligt. Dit geeft een goede indicatie van de hoeveelheid optredende slagschaduw. Zie bijlage 2 voor de nieuwe berekening.

Windturbine	Slagschaduw op kantoren per windturbine, zonder BP Papendorp	Slagschaduw op kantoren per windturbine, incl. BP Papendorp	Toename (u:mm)
1	04:24	04:24	-
2	18:36	18:36	-
3	23:10	23:10	-
4	52:09	58:50	6:41
Som	**98:19**	**105:00**	**6:41**

Slechts een klein deel van deze slagschaduw leidt tot normoverschrijding en daarmee verplichte stilstand. Kantoren mogen immers van de lokale slagschaduwnorm (opgenomen als voorwaardelijke verplichting in de planregels van BP Windpark Rijnenburg & Reijerscop) niet meer dan 5:40 uur slagschaduw per jaar ondervinden, en alleen de slagschaduw die optreedt op weekdagen tijdens kantooruren wordt meegeteld. Zoals uit Figuur 1 blijkt ligt slechts een zeer klein deel van BP Papendorp binnen de 5:40-uur contour: op het grootste gedeelte van Papendorp ligt de jaarlijkse slagschaduw tussen de 0u en 5:40u per jaar en is dus geen stilstand benodigd. De toename van 6:41 u/jr is dus een aanzienlijke overschatting van de benodigde stilstand. (Ter vergelijking: uit de eerdere berekening bleek dat 1168 uur/jaar slagschaduw op kantoren leidt tot 1:38 uur stilzettijd om aan de norm te voldoen.) Aangezien de opbrengstderving vanwege stilstand voor alle kantoren samen van grootte-orde van 0,005% is[2] brengt deze toename de economische uitvoerbaarheid met zekerheid niet in het geding.

[2] Zie tabel 2 in het document 'Onderbouwing lokale slagschaduwnorm Windpark Rijnenburg en Reijerscop' voor de herkomst van de getallen uit deze paragraaf.

Conclusie BP Windpark Rijnenburg en Reijerscop

De nieuwe gevoelige objecten (waaronder woningen) en kantoren die mogelijk worden gemaakt met bestemmingsplannen Papendorp en Groenewoud leiden tot een kleine toename van de voorgeschreven stilzettijd, om te kunnen voldoen aan de lokale normen voor slagschaduw op gevoelige objecten en kantoren. Uit berekeningen van de *toename* van de verwachte stilzettijd blijkt dat het gaat om een toename van ca. 0,04%. Een dergelijke vrijwel verwaarloosbare toename brengt de economische uitvoerbaarheid van het windpark met zekerheid niet in gevaar.

Conclusie BP Groenewoud

Gezien de lokale norm van 0u-slagschaduw per jaar zullen gevoelige objecten binnen BP Groenewoud geen hinderlijke slagschaduw van windturbines ondervinden.
Zoals hierboven beschreven zouden de gevoelige objecten binnen BP Groenewoud jaarlijks maximaal 15:57 uur slagschaduw ondervinden als er geen stilstand zou worden toegepast.
Tegelijk zien wij dat de toename van de benodigde stilstand vanwege BP Groenewoud en BP Papendorp gezamenlijk 12:33 uur/jaar bedraagt. Dit verschil wordt veroorzaakt doordat bij de 12:33 uur per jaar berekening met alle gevoelige objecten rekening wordt gehouden en bij de 15:57 uur per jaar berekening alleen met gevoelige objecten binnen BP Groenewoud. Door de korte afstand tussen beide nieuwe plangebieden zal de toename enkel vanwege BP Groenewoud dus iets lager zijn dan 12:33 uur/jaar.

Conclusie BP Papendorp

Gevoelige objecten

Gezien de lokale norm van 0u-slagschaduw per jaar zullen gevoelige objecten binnen BP Papendorp geen hinderlijke slagschaduw van windturbines ondervinden.
Zoals hierboven beschreven zouden de gevoelige objecten binnen BP Papendorp jaarlijks 20:16 uur slagschaduw ondervinden als er geen stilstand zou worden toegepast.
Tegelijk zien wij dat de toename van de benodigde stilstand vanwege BP Groenewoud en BP Papendorp gezamenlijk ca. 12:33 uur/jaar bedraagt. Dit verschil wordt veroorzaakt doordat bij de 12:33 uur per jaar berekening met alle gevoelige objecten rekening wordt gehouden en bij de 20:16 uur per jaar berekening alleen met gevoelige objecten binnen BP Papendorp. Door de korte afstand tussen beide nieuwe plangebieden zal de toename enkel vanwege BP Papendorp dus iets lager zijn dan 12:33 uur/jaar.

Kantoren

De niet te realiseren kantoren in het BP Papendorp liggen grotendeels tussen de 0u- en de 5:40-u slagschaduwcontouren (zie Figuur 1). Dat betekent dat deze kantoren enkele uren per jaar slagschaduw kunnen ondervinden. Gezien de ligging van Papendorp ten noordoosten van de oostelijke windturbine van Windpark Rijnenburg en Reijerscop zal deze slagschaduw optreden in de winter, vlak voor

zonsondergang. Dat zijn immers de momenten dat de zon laag in het zuidwesten staat, en dus een lange slagschaduw naar het noordoosten kan werpen.
De gemeente stelt zich op het standpunt dat de lokale norm voor kantoren van 5:40 u/jr tijdens weekdagen en kantoortijden een als gevolg van slagschaduw ontoelaatbaar werkklimaat in deze kantoren voorkomt.
De stilstand om ter plaatse van nieuw te realiseren kantoren binnen de 5:40 uurcontour aan de lokale norm te voldoen is zo gering dat de economische uitvoerbaarheid van het windpark niet in het geding komt.

Bijlage 1 – Slagschaduw op gevoelige objecten

Inclusief de nieuwe bestemmingsvlakken van BP Papendorp en BP Groenewoud. De rekenresultaten uit deze bijlage zijn vergeleken met de berekening die is gegeven op pagina's 9 t/m 264 van de 'Oplegnotitie Slagschaduw windpark Rijnenburg en Reijerscop'. De berekening gaat uit van hinderlijke slagschaduw vanaf 3 graden boven de horizon.

Bijlage 2 – Slagschaduw op kantoren

Inclusief de nieuwe bestemmingsvlakken van BP Papendorp, die kantoren mogelijk maken. De berekening gaat uit van hinderlijke slagschaduw vanaf 3 graden boven de horizon.

Total amount of flickering on the shadow receptors caused by each WTG

No.	Name	Expected [h/year]
1	MH custom 6200 180.0 !O! hub: 180,0 m (TOT: 270,0 m) (59)	101:29
2	MH custom 6200 180.0 !O! hub: 180,0 m (TOT: 270,0 m) (60)	93:13
3	MH custom 6200 180.0 !O! hub: 180,0 m (TOT: 270,0 m) (61)	103:05
4	MH custom 6200 180.0 !O! hub: 180,0 m (TOT: 270,0 m) (62)	115:47

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

SHADOW - Main Result

Calculation: 240416 Copy of VKA bovengrens_kantoren (gevoeligheidsanalyse)

...continued from previous page

No.	Name	Expected [h/year]
3	MH custom 6200 180.0 !O! hub: 180,0 m (TOT: 270,0 m) (61)	23:10
4	MH custom 6200 180.0 !O! hub: 180,0 m (TOT: 270,0 m) (62)	58:50

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.
