1 Inleiding

Naar aanleiding van de aanzienlijke bouwhoogte van de geplande bebouwing binnen bestemmingsplan Schiekadeblok is een bezonningsonderzoek uitgevoerd.

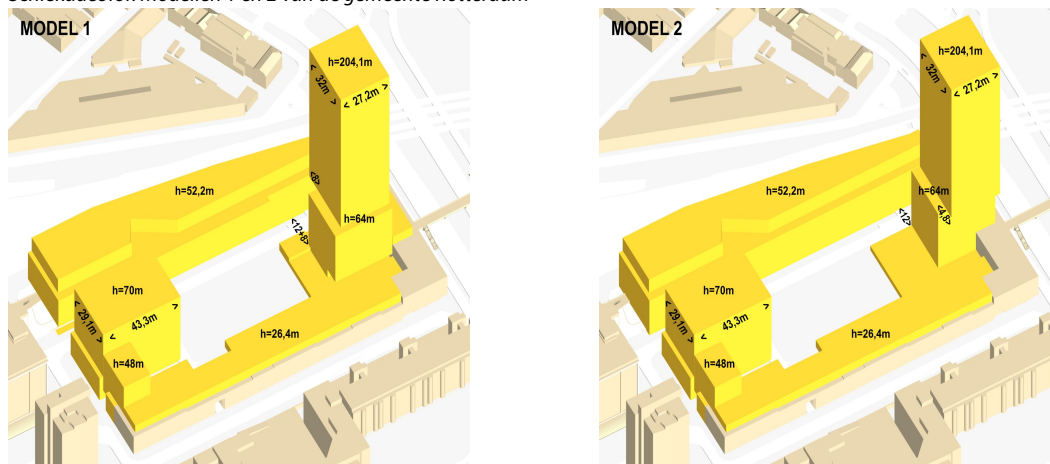

Doel van het onderzoek is de schaduwwerking van de geplande hoogbouw te toetsen aan de bezonningscriteria van de hoogbouwvisie 2019 van de gemeente Rotterdam. In verband met specifieke criteria voor de bezonning van de woningen in de Provenierswijk, zoals beschreven in het in 2008 vastgestelde stedenbouwkundig plan, is tevens de bezonning van de bestaande woningen in de Provenierswijk onderzocht.

Voor het onderzoek is initieel gebruik gemaakt van een door de gemeente aangeleverd 3D-model van 2 mogelijke bebouwingsscenario's van het Schiekadeblok, van gemeentelijke referentiemodellen alsmede van openbare gegevens van de bestaande bebouwing. Na afronding van het oorspronkelijke onderzoek is aanvullend de uitwerking voor het bestemmingsplan doorgetrokken.

Doordat hoogbouw tevens toegestaan is binnen de huidige ruimtelijke kaders van het Rotterdam Central District (RCD), kunnen de schaduweffecten van deze gebouwen een gezamenlijk effect teweeg brengen. De bestemde hoogbouw op de locaties Delftseplein, Delftsepoort en Unilever is om deze reden in het onderzoek meegenomen. Hiermee zijn de cumulatieve effecten van de nu planologisch mogelijk gemaakte projecten met hoogbouw in het Rotterdam Central District in beeld gebracht.

De berekeningen zijn uitgevoerd met eigen programmatuur binnen het softwarepakket Radiance. De schaduw-/bezonningsduur staat los van het effect van bewolking.

f1.1 Schiekadeblok modellen 1 en 2 van de gemeente Rotterdam

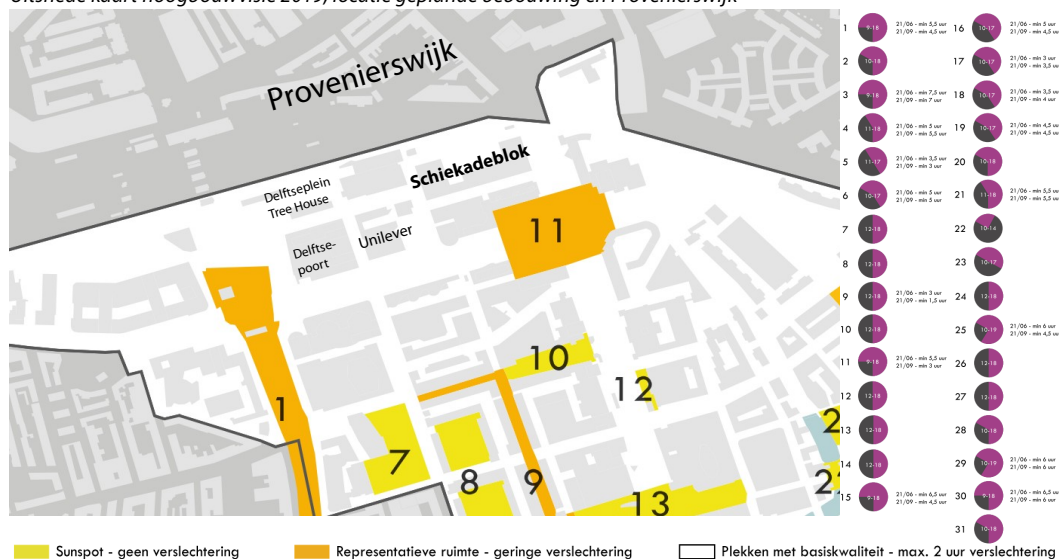

De rekenresultaten van model 1 en model 2 liggen zo dicht bij elkaar dat voor de overzichtelijkheid alleen de resultaten van model 1 worden weergegeven tenzij er specifieke verschillen zijn vastgesteld.

2 Toetsing criteria hoogbouwvisie

2.1 Hoogbouwvisie

Voor gebouwen hoger dan 70 meter is in Rotterdam de hoogbouwvisie 2019 van toepassing¹. Hierin is een rekenmethode voor bezonning beschreven. Bij de toetsing wordt gerekend met door de gemeente opgestelde referentiemodellen. In deze modellen is de planologische bebouwingssituatie geprojecteerd voor de referentiejaar 2011 en 2019. De eisen voor bezonning in de hoogbouwvisie richten zich op de bezonning op gebiedsniveau. Er zijn openbare ruimtes aangewezen met een bepaald kwaliteitsniveau: sunspots, representatieve ruimtes en openbare ruimte met een basiskwaliteit.

f2.1 Uitsnede kaart hoogbouwvisie 2019, locatie geplande bebouwing en Provenierswijk

Opgemerkt wordt dat de Provenierswijk buiten het te toetsen gebied van de hoogbouwvisie valt. Gezien de ligging in het potentiële invloedsgebied van de te toetsen hoogbouw is de Provenierswijk echter voor de volledigheid in de beoordeling van het gebied met een 'basiskwaliteit' meegenomen.

1 Hoogbouwvisie 2019: <https://www.rotterdam.nl/wonen-leven/hoogbouwvisie/>

2.2 Rekenmodellen

f2.2 Schiekadeblok model 1 en hoogbouw RCD, inclusief referentiemodel 2019^{2,3}

f2.3 Referentiemodel 2019

f2.4 Referentiemodel 2011

2.3 Sunspots

Op de zogenaamde sunspots mag binnen bepaalde tijden géén verslechtering van de bezonning plaats vinden. Zoals te zien in figuur 2.1 zijn in de directe omgeving van het plangebied géén sunspots geprojecteerd.

2.4 Representatieve ruimte

In gebieden met de aanduiding 'representatieve ruimte' mag op de toetsingsdata 21 juni en 21 september een geringe verslechtering van de bezonning plaats vinden en geldt een eis voor een minimale gemiddelde bezonningsduur. Doordat de zonnebaan in de tweede helft van het jaar gespiegeld is aan de 1^e jaarhelft, is de berekende bezonning op 21 september ook representatief voor 21 maart.

In figuur 2.1 zijn de voorwaarden voor de minimale bezonningsduur binnen bepaalde kloktijden aangegeven. In deze situatie is dit van toepassing voor het gebied Kruisplein/Stationsplein (gebied 1) en het Hofplein (gebied 11).

Volgens de rekenmethode van de hoogbouwvisie wordt de bezonningsduur vastgesteld voor de situatie met geplande hoogbouw in combinatie met de bouw mogelijkheden volgens het gemeentelijke referentiemodel 2019. Tevens zijn de bestaande bebouwing en bekende (indicatieve) bouwplannen in het model opgenomen². Het complete rekenmodel voor model 1 is weergegeven in figuur 2.2. Model 2 is dezelfde manier doorgerekend.

De bezonningsduur kan per plaats in het gebied variëren. In de rekenmethode wordt voor de 'representatieve ruimte' de gemiddelde bezonningsduur beoordeeld.

Voor de volledigheid wordt tevens de gemiddelde bezonningsduur bepaald in de situatie van het referentiemodel met planologische mogelijkheden in 2019, zonder de planologische wijzigingen. Het rekenmodel is van het referentiemodel 2019 is te zien in figuur 2.3.

In bijlage 1 wordt de bezonningsduur binnen de kloktijden grafisch weergegeven. Met de bijbehorende legenda is plaatselijk de bezonningsduur af te lezen. Zo komen bijvoorbeeld de kleuren donker blauw, groen en rood overeen met respectievelijk 1, 3 en 6 uren zon. De onderste afbeelding laat de plaatselijke afname van de bezonningsduur c.q. de plaatselijke schaduwduur ten gevolge van de bebouwingswijziging zien. Hierbij wordt een andere kleursetting gehanteerd. De specifieke legenda is in de afbeelding opgenomen. Bij deze afbeeldingen komt blauw overeen met maximaal circa 1 uur afname van de bezonning en groen met circa 2 uren.

Doordat oude planologische bouw mogelijkheden komen te vervallen of minder omvangrijk worden, zijn er plaatsen waar sprake is van een rekenkundige toename van de bezonning ten opzichte van het referentiemodel, waaronder in juni aan de noordzijde van het Hofplein

2 Inclusief bebouwings mogelijkheden volgens bestemmingsplan RCD. Diverse niet gerealiseerde planologische hoogbouw volumes komen te vervallen, hier is de bestaande bebouwing het uitgangspunt.

en in juni op het Stationsplein. Opgemerkt wordt dat een berekende toename van de bezonning niet wordt weergegeven in de laatst genoemde afbeelding.

2.1 *Gemiddelde bezonning Kruisplein/Stationsplein (gebied 1); beoordeling met criterium 'representatieve ruimte'*

datum	kloktijd [u]	referentie 2019 [u]	geplande situatie ² [u]	criterium minimum [u]	beoordeling
21 juni	09.00 – 18.00	6.24	6.40	5.30	voldoet
21 september	09.00 – 18.00	4.55	4.55	4.30	voldoet

2.2 *Gemiddelde bezonning Hofplein (gebied 11); beoordeling met criterium 'representatieve ruimte'*

datum	kloktijd [u]	referentie 2019 [u]	geplande situatie ² [u]	criterium minimum [u]	beoordeling
21 juni	09.00 – 18.00	6.25	6.43	5.30	voldoet
21 september	09.00 – 18.00	3.28	3.24	3.00	voldoet

De beoordeling van de bezonning vindt plaats aan de hand van de gemiddelde bezonningsduur. De berekende gemiddelde bezonningsduur binnen de aangegeven kloktijden staat vermeld in de tabellen 2.1 en 2.2. Deze geleden zowel voor model 1 als voor model 2. Het vermelde criterium is de voorgeschreven minimale gemiddelde bezonningsduur in deze gebieden. De schaduwwerking van de geplande hoogbouw, zowel met model 1 als model 2 van het Schiekadeblok, voldoet aan de eisen voor gebieden met de aanduiding 'representatieve ruimte'.

2.5 Basiskwaliteit

De aangewezen gebieden met een 'basiskwaliteit' mogen maximaal 2 uur extra in de schaduw vallen op de data 21 juni en 21 september. Voor de vaststelling geldt de situatie van de geplande hoogbouw in combinatie met de bouw mogelijkheden volgens het gemeentelijke referentiemodel 2019^{2,3} (model 1, figuur 2.2), ten opzichte van situatie volgens het gemeentelijke referentiemodel 2011. Dit referentiemodel is afgebeeld in figuur 2.4. Conform de rekenmethode van de hoogbouwvisie wordt de gemiddelde schaduwduur/ bezonningsafname beoordeeld. Model 2 is dezelfde manier doorgerekend.

In bijlagen 2 wordt de bezonningsduur grafisch weergegeven. Met de bijbehorende legenda is plaatselijk de bezonningsduur af te lezen. De onderste afbeelding laat de plaatselijke afname van de bezonningsduur c.q. de plaatselijke schaduwduur ten gevolge van de bebouwingswijziging zien.

Doordat een aantal oude planologische bouw mogelijkheden komen te vervallen zijn er plaatsen waar sprake is van een rekenkundige toename van de bezonning ten opzichte van het referentiemodel. Opgemerkt wordt dat een berekende toename van de bezonning niet wordt weergegeven in de laatst genoemde afbeelding.

3 De toepassing van het referentiemodel 2019 in combinatie met de geplande hoogbouw wordt in de rekenmethode voor de basiskwaliteit in de hoogbouwvisie niet expliciet beschreven. Volgens opgave van de gemeente is dit echter zo bedoeld ten einde een maximale vermindering van de bezonning van 2 uren ten opzicht van referentiejaar 2011 te garanderen.

Aan de hand van deze afbeeldingen is vast te stellen dat met name ter plaatse van de Molenwaterweg een vermindering van de bezonning optreedt. Voor deze straat is de gemiddelde bezonningsduur berekend en beoordeeld. De rekenresultaten voor model 1 zijn opgenomen in tabel 2.3 en voor model 2 in tabel 2.4. De gemiddelde afname van de bezonningsduur c.q. de gemiddelde schaduwduur bedraagt in juni 4 minuten en in september 36 of 41 minuten voor respectievelijk model 1 of 2. Op andere plaatsen is volgens deze methode minder schaduw te verwachten. De schaduwwerking van de geplande hoogbouw voldoet daarmee aan de eisen voor gebieden met een 'basiskwaliteit'.

t2.3 *Gemiddelde bezonning Molenwaterweg met Schiekadeblok model 1; beoordeling met criterium 'basiskwaliteit'*

datum	referentie 2011 [u]	geplande situatie ² [u]	verschil [u]	criterium afname [u]	beoordeling
21 juni	9.34	9.30	0.04 afname	2.00	Voldoet
21 september	5.21	4.45	0.36 afname	2.00	voldoet

t2.4 *Gemiddelde bezonning Molenwaterweg met Schiekadeblok model 2; beoordeling met criterium 'basiskwaliteit'*

datum	referentie 2011 [u]	geplande situatie ² [u]	verschil [u]	criterium afname [u]	beoordeling
21 juni	9.34	9.30	0.04 afname	2.00	Voldoet
21 september	5.21	4.40	0.41 afname	2.00	voldoet

In bijlage 3 wordt voor de volledigheid het schaduwverloop van de gecombineerde situatie van de geplande hoogbouw en het referentiemodel inzichtelijk gemaakt. Op plaatsen waar sprake is van een schaduwtoename ten opzichte van de situatie van referentiemodel 2011 is de schaduw rood gekleurd, en waar de bezonning rekenkundig toeneemt is dat in het groen weergegeven. De schaduw van bestaande bebouwing en van referentiemodel 2011 is grijs.

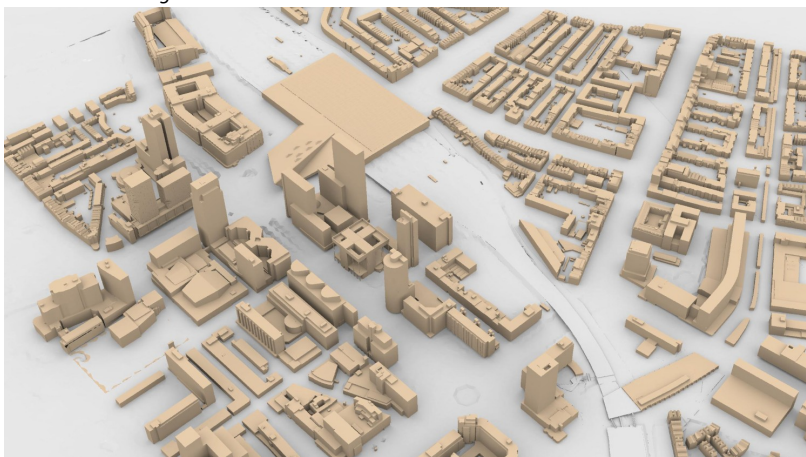

3 Toetsing woningen Provenierswijk

3.1 Criterium

In het stedenbouwkundig plan Centraal District Rotterdam uit 2008 is een leidraad opgesteld voor de toetsing van de schaduwwerking van de hoogbouw in dit gebied op de bestaande woningen in de ten noorden van de hoogbouw gelegen Provenierswijk. De leidraad gaat uit van een maatgevende situatie tussen 21 maart en 23 september. De extra schaduw op woningen van de Provenierswijk mag in deze periode maximaal 1 uur bedragen. Dit is onderzocht met behulp van berekeningen op een groot aantal meetpunten in een 3D-model van de bestaande en de geplande bebouwingssituatie.

3.2 Rekenmodellen

f3.1 3D-model bestaande bebouwingssituatie

f3.2 3D-model geplande bebouwingssituatie

3.3 Resultaten en beoordeling

Een visualisatie van de schaduwwerking in de toetsingsperiode is te zien in bijlage 5.

De bezonningsduur ter plaatse van de woningen in de Provenierswijk is getoetst aan de hand van meetpunten op de voor- en achtergevels van individuele woningen. De meethoogte bedraagt 0,75 meter boven vloerniveau. Een compleet overzicht van de meetpunten is te zien in figuur 3.3. In figuur 3.4 is een uitsnede van het gebied weergegeven ter hoogte van de woningen die het dichtst bij het plangebied gesitueerd zijn.

f3.3 Overzicht meetpunten bij woningen

f3.4 Meetpunten bij de dichtstbij het plangebied gelegen woningen

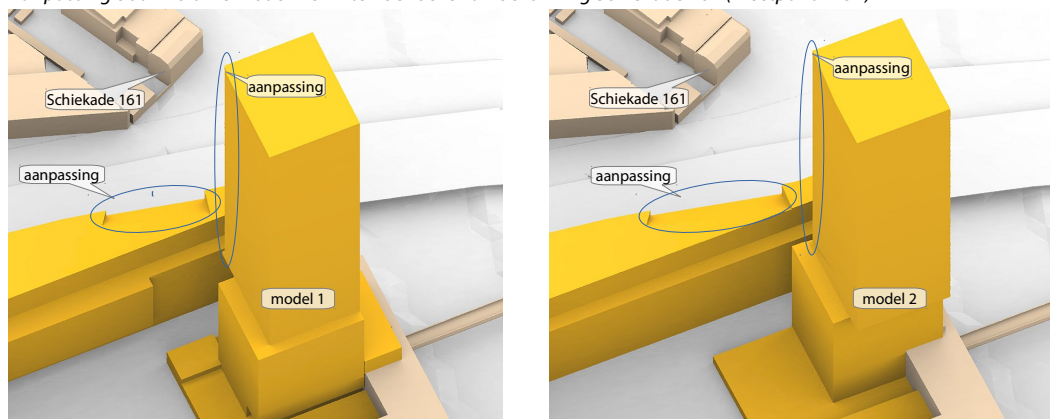

De bezonningsduur op de meetposities is berekend op een 7-tal data in de toetsingsperiode, met een interval van 1 maand. Het verschil tussen de berekende bezonningsduur in de bestaande situatie en de geplande situatie voor de bestemmingsplannen Schiekadeblok en RCD is de te toetsen toegevoegde schaduw.

De rekenresultaten met model 1 zijn in tabelvorm opgenomen in bijlage 4. Vastgesteld is dat bij een volledige benutting van het onderzocht bouwvolume bij de getoetste woning aan de achterzijde van Schiekade 161 (meetpunt 1134) in maart en september sprake is van een toename van de schaduwduur van 2.20 uur, hetgeen de grenswaarde van 1 uur overschrijdt. De doorrekening van model 2 laat een schaduwduur zien van 2.45 uur. Op andere toetsingsdata voldoet de bezonning op dit adres. Bij alle overige onderzochte woningen blijft de toename van schaduw binnen de grens van maximaal 1 uur.

Naast de standaard toetsing van de onderste woonlaag is de toetsing herhaald voor de 2 bovenliggende verdiepingen, ervan uitgaande dat daar ook individuele woningen aanwezig kunnen zijn. De rekenresultaten uitgaande van model 1 zijn opgenomen in bijlage 6. Het blijkt dat ook op deze verdiepingen bij alle woningen maximaal een uur extra schaduw te verwachten is, met uitzondering van Schiekade 161. Bij 1 van de extra getoetste woonlagen op dit adres voldoet de bezonning niet, bij de andere woonlaag voldoet de bezonning met model 1 wel en met model 2 niet (5 minuten langer schaduw van de grenswaarde).

De overschrijding van de maximale schaduwduur aan de Schiekade 161 is te voorkomen door een beperkte aanpassingen van het toekomstige gebouwwolume. De benodigde aanpassingen zijn weergegeven in figuur 3.5, bestaande uit een plaatselijke verlaging van de spoorzone en een minimale aanpassing van de noordwesthoek van de hoogbouw. Met deze aanpassingen voldoet de schaduwwerking van de modellen 1 en 2 aan de leidraad voor de bezonning van de woningen in de Provenierswijk.

f3.5 Aanpassing bouwvolume model 1 en 2 ten behoeve van bezonning Schiekade 161 (meetpunt 1134)

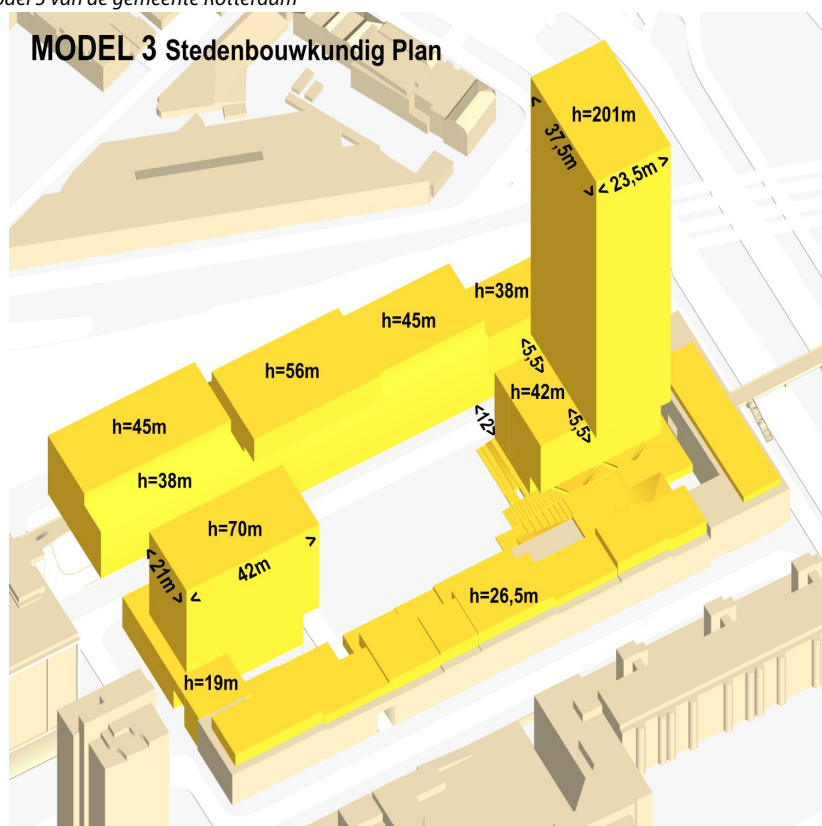

4 Uitwerking in bestemmingsplan

De bebouwingssituatie is na afronding van het oorspronkelijke onderzoek verder uitgewerkt voor het bestemmingsplan. De primaire aanpassingen in model 3 zijn:

- de positionering van de Perrontoren met een grotere afstand naar de spoorstrook;
- een beperkte aanpassing in de hoogte van de spoorstrook;
- een ander profiel van de Schietoren, inclusief 5,5 meter overkraging aan de Schiestraat voor het bouwdeel boven de 42 meter hoogte;
- Het onderste deel van de toren (tot 42 meter hoogte) kraagt uit aan de pleinzijde.

f4.1 Aanzicht model 3 van de gemeente Rotterdam

Aanvullend is ook dit model doorgerekend. De rekenresultaten geven een vergelijkbare uitkomst, behalve dat aanpassingen zoals in figuur 3.5 met dit model niet nodig zijn. De bezonning voldoet aan de criteria van de hoogbouwvisie en aan de leidraad voor de bezonning van de woningen in de Provenierswijk.

5 Conclusie

In het bestemmingsplan Schiekadeblok wordt onder meer nieuwe hoogbouw mogelijk gemaakt. In verband met de schaduwwerking van de geplande hoogbouw is een bezonningsonderzoek uitgevoerd. Doel van het onderzoek is de schaduwwerking van de geplande hoogbouw te toetsen aan de bezonningscriteria van de hoogbouwvisie 2019 van de gemeente Rotterdam. In verband met specifieke criteria voor de bezonning van de woningen in de Provenierswijk, zoals beschreven in het in 2008 vastgestelde stedenbouwkundig plan, is tevens de bezonning van de bestaande woningen in de Provenierswijk onderzocht.

Doordat hoogbouw tevens toegestaan is binnen de huidige ruimtelijke kaders van het Rotterdam Central District (RCD), kunnen de schaduweffecten van deze gebouwen een gezamenlijk effect teweeg brengen. De bestemde hoogbouw op de locaties Delftseplein, Delftsepoort en Unilever is om deze reden in het onderzoek meegenomen. Hiermee zijn de cumulatieve effecten van de nu planologisch mogelijk gemaakte projecten met hoogbouw in het Rotterdam Central District in beeld gebracht.

Voor het onderzoek is initieel gebruik gemaakt van een door de gemeente aangeleverd 3D-model van 2 mogelijke bebouwingsscenario's van het Schiekadeblok, van gemeentelijke referentiemodellen alsmede van openbare gegevens van de bestaande bebouwing. Na afronding van het oorspronkelijke onderzoek is aanvullend de uitwerking voor het bestemmingsplan doorgerekend.

De schaduw-/bezonningsduur staat los van het effect van bewolking.

Aan de hand van de uitgevoerde bezonningssimulaties wordt het volgende geconcludeerd:

- De onderzoeksresultaten van de 2 onderzochte uitwerkingen van het gebouwwolume liggen zo dicht bij elkaar dat de conclusies van het onderzoek gelden voor beide uitwerkingen.
- Het plangebied ligt niet in de buurt van 'sunspots', waardoor op de deze locaties geen schaduw van de hoogbouw komt.
- In de gebieden die in de hoogbouwvisie zijn aangewezen als 'representatieve ruimte' wordt met de voorgeschreven rekenmethode het minimaal aantal zonuren gewaarborgd.
- In de meeste straten rondom de geplande hoogbouw geldt het criterium 'basiskwaliteit'. De Provenierswijk valt buiten het te toetsen gebied van de hoogbouwvisie. Gezien de ligging in het potentiële invloedsgebied van de geplande hoogbouw is de Provenierswijk echter voor de volledigheid in de beoordeling van het gebied met een 'basiskwaliteit' meegenomen. De toegevoegde schaduw ten gevolge van de geplande hoogbouw in het bestemmingsplangebied blijft in deze gebieden conform de rekenmethode van de hoogbouwvisie binnen de grenswaarde van 2 uur.
- De schaduwwerking van de geplande hoogbouw in het bestemmingsplangebied voldoet, in combinatie met de toekomstige hoogbouw in bestemmingsplangebied RCD, aan de eisen zoals beschreven in hoofdstuk 3.7. van de hoogbouwvisie Rotterdam 2019.

- Met uitzondering van enkele woningen aan de Schiekade 161 voldoet de schaduwwerking van de getoetste hoogbouw aan de leidraad voor de bezonning van de woningen in de Provenierswijk.
- Vastgesteld is dat een beperkt deel van het geplande gebouwwolume bepalend is voor de overschrijding van de schaduwduur aan de Schiekade 161. Indien het gebouwwolume hierop wordt aangepast zal ook op dit adres worden voldaan aan de leidraad voor de bezonning van de woningen in de Provenierswijk.
- De bebouwingssituatie is na afronding van het oorspronkelijke onderzoek verder uitgewerkt voor het bestemmingsplan. Dit geeft een vergelijkbaar resultaat, behalve dat de bezonning met dit model zonder verdere aanpassing voldoet aan de leidraad voor de bezonning van de woningen in de Provenierswijk.
