

## Calculation Situation 1

- ▶ Characterization
- ▶ Emission
- ▶ Deposition

This document provides you with results of a nitrogen deposition calculation performed with the AERIUS Calculator. You can use this document as a substantiation of a license under the Nature Conservation Act 1998.

The results indicate nitrogen effects of this project to her surroundings. The area includes both Natura 2000 areas as well as protected natural reserves. Only for Natura 2000 areas habitat types occur and whether the critical load is exceeded. Development room is in the current version of the Calculator is not yet visible.

The calculation of nitrogen emissions is based on the components ammonia ( $\text{NH}_3$ ) and nitrogen oxides ( $\text{NO}_x$ ), or one of each. The deposition of the project will be calculated and drawn in both maximum and average deposition per hectare. The depositions are calculated up to a distance of 15.0 miles from the source.
