## HOOFDSTUK 1 ALGEMEEN

### 1.1 INLEIDING

Onderhavig document betreft de statische berekening van de nieuwbouw van de woning van dhr. Galama en mevr. Galama-Sevinga te Veenhuizen in de gemeente Noordenveld. Verantwoordelijk voor het ontwerp is DAAD Architecten B.V. te Beilen.

### 1.2 OPBOUW CONSTRUCTIE

|                       |    |  |
|-----------------------|----|--|
| Fundatie              | -> | Balkenrooster op prefab betonnen heipalen      |
| Kelder                | -> | Prefab kelder volgens leverancier              |
| Begane grondvloer     | -> | PS-combinatievloer h= 210mm + 100mm afwerklaag |
| Kelderdekvlloer       | -> | Breedplaatvloer h= 210mm + 100mm afwerklaag    |
| Verdiepingsvloer      | -> | Breedplaatvloer h= 250mm + 100mm afwerklaag    |
| Kapconstructie        | -> | Prefab doosdak                                 |
| Hoofddraagconstructie | -> | Metselwerk wanden i.c.m. betonvloeren          |
| Gevels                | -> | Houten beplating en gevelputen                 |

In het bouwbesluit 2012 wordt de term 'hoofddraagconstructie' niet meer gehanteerd. Er wordt gesproken over 'algemene sterkte van bouwconstructies' en 'sterkte van bouwconstructies bij brand'. Navolgend wordt onderstaande gesteld in het bouwbesluit.

- Artikel 2.1 => Een te bouwen bouwwerk is voldoende bestand tegen de daarop werkende krachten.
- Artikel 2.9 => Een te bouwen bouwwerk kan bij brand gedurende redelijke tijd worden verlaten en doorzocht, zonder dat er gevaar voor instorting is.

### 1.3 STABILITEIT

De stabiliteit van de woning wordt gerealiseerd door haaks op elkaar staande metselwerk en houtskeletbouw gefundeerde wanden i.c.m. de schijfwerking in de vloeren. Er zijn voldoende stabiliseringselementen aanwezig. Een verdere stabiliteitsbeschouwing wordt niet noodzakelijk geacht.

### 1.4 FUNDERING

De woning wordt gefundeerd op een balkenrooster op prefab betonnen heipalen. Uitgangspunt is:

## HOOFDSTUK 3 BELASTINGCOMBINATIES

Voor de partiële belastingfactoren behorende bij gevolgklasse CC1 of CC3 - respectievelijk betrouwbaarheidsklasse RC1 of RC3 - dient de partiële belastingfactor van gevolgklasse CC2 - betrouwbaarheidsklasse RC2 - verdisconteerd te worden met een factor  $K_{Fl} = 0,90$  voor CC1 (RC1) respectievelijk  $K_{Fl} = 1,10$  voor CC3 (RC3).

- CC1 (RC1) =>  $\gamma_{f,g} = 1,20 * 0,9 = 1,10$  |  $\gamma_{f,q} = 1,50 * 0,9 = 1,35$
- CC2 (RC2) =>  $\gamma_{f,g} = 1,20 * 1,0 = 1,20$  |  $\gamma_{f,q} = 1,50 * 1,0 = 1,50$
- CC3 (RC3) =>  $\gamma_{f,g} = 1,20 * 1,1 = 1,30$  |  $\gamma_{f,q} = 1,50 * 1,1 = 1,65$

- U.L.S. = Ultimate Limit States
- S.L.S. = Serviceability Limit States

Geachte heer Nijenstein,

Op 31 mei 2017 ontvingen wij van U de opdracht voor het uitvoeren van een geotechnisch onderzoek ten behoeve van bovengenoemd project. In de vorm van dit rapport, doen wij u de resultaten toekomen.

### Veldwerkzaamheden.

Het grondonderzoek heeft bestaan uit 3 sonderingen, waarvan de resultaten zijn gepresenteerd op de sondeergraffieken DKM1,D2 en D3.

De conus- en wrijvingsweerstand, uitgedrukt in mN/m<sup>2</sup>, is hierop uitgezet tegen de diepte in meters ten opzichte van N.A.P.

De sonderingen zijn uitgevoerd met onze standaard sondeerwagen.

De metingen zijn verricht met een gladde elektrische (kleef-)mantelconus met hellingmeter, een en ander conform norm NEN-EN-ISO 22476-1 klasse 3.

Bij de kleefmantelsondering (DKM) is naast de conusweerstand eveneens de plaatselijke wrijvingsweerstand geregistreerd. Het op de betreffende sondeergraffieken weergegeven wrijvingsgetal, geeft de verhouding weer tussen de wrijvingsweerstand en de conusweerstand in procenten en is kenmerkend voor de verschillende grondsoorten.

Als indicatie kunnen voor normaal geconsolideerde grondlagen, onder de grondwaterstand de volgende percentages worden aangehouden;

| <u>Wrijvingsgetal in %</u> | <u>Grondsoort</u>   |
|----------------------------|---------------------|
| 0.3 - 1.2                  | Zand, grof tot fijn |
| 1.5 - 2.0                  | Silt                |

Tussen de verschillende grondsoorten komen overgangsvormen voor waardoor de aangegeven grenzen niet als maatgevend zijn te beschouwen.

Teneinde een inzicht te krijgen in de aard van de toplagen en de ligging van de grondwaterstand, is in aanvulling op de sonderingen een handboring uitgevoerd. Het opgeboorde materiaal is in het veld geclassificeerd, samengesteld tot de handboorstaat HB1 en als bijlage aan dit rapport toegevoegd.

De onderzochte punten en een aantal referentiehoogtes zijn door onze veldmedewerker uitgezet en in hoogte vastgelegd ten opzichte van N.A.P.

De ligging van de sondeerlocaties is weergegeven op de bijgaande situatietekening.

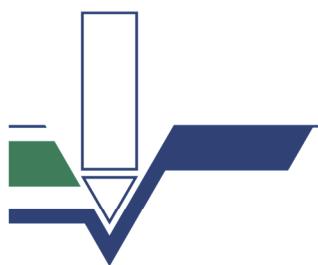

Alle gegevens van de inmetingen genoemd in deze rapportage zijn een momentopname en alleen te gebruiken voor het grondonderzoek.

Vertrouwende u hierbij van dienst te zijn geweest, verblijven wij.

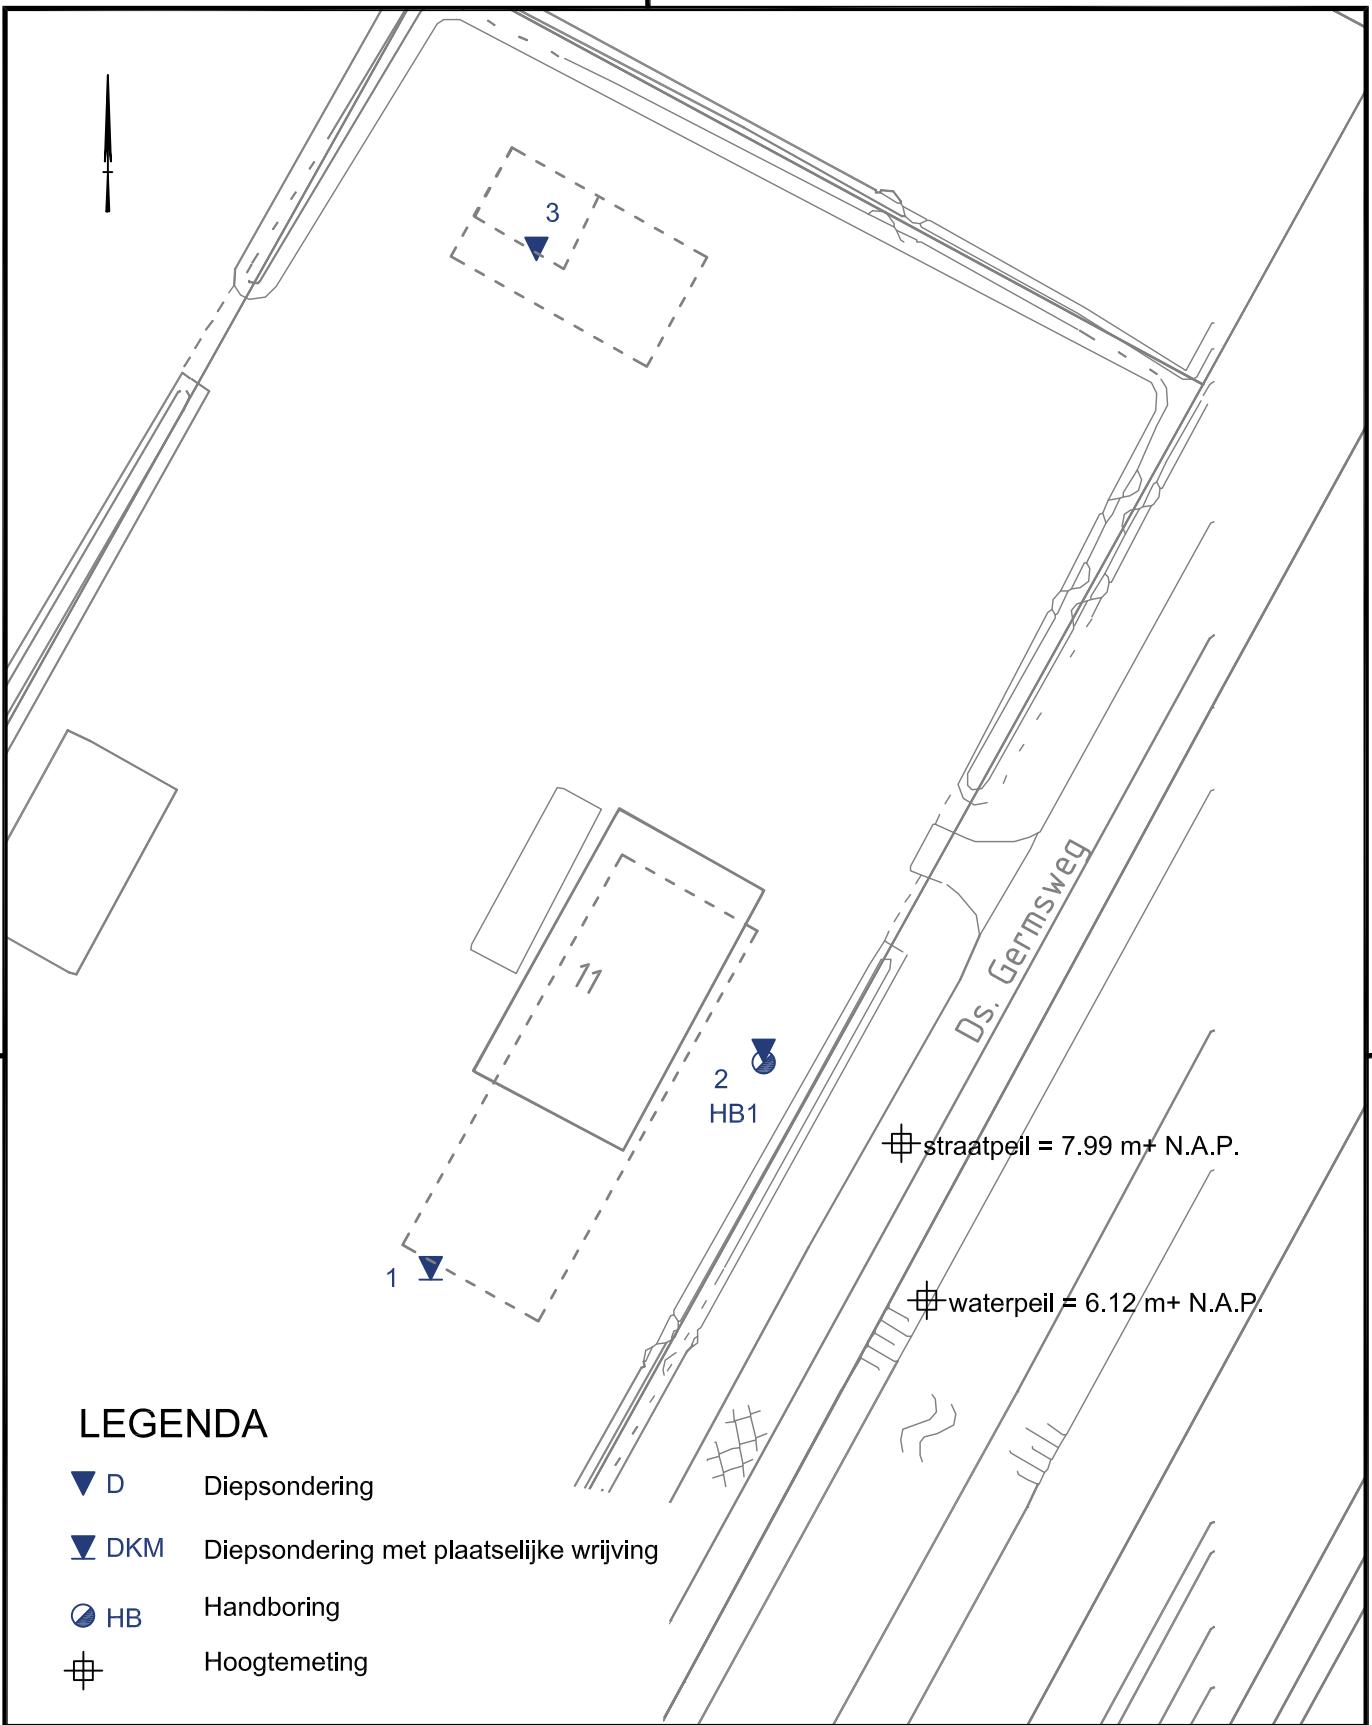

met vriendelijke groet,

  
Albert Palsma

Opmerkingen

[1] \* = Eisen met betrekking tot minimum wapening zijn toegepast, zie nationale bijlage art. 9.2.1.1(1).

[2] Benodigde wapening en inwendige hefboomsarm zijn bepaald volgens gedrongen ligger detaillering, zie nationale bijlage art. 6.1(10).

[68] MRd als gevolg van de gedrongen ligger berekening (NB. 6.1(10)) is groter dan MRd volgens 6.1(P). De momentweerstand en inwendige hefboomsarm volgens 6.1(P) zijn maatgevend en daarom alsnog toegepast.

## Opmerkingen

[2] Benodigde wapening en inwendige hefboomsarm zijn bepaald volgens gedrongen ligger detaillering, zie nationale bijlage art. 6.1(10).

[68] MRD als gevolg van de gedrongen ligger berekening (NB. 6.1(10)) is groter dan MRD volgens 6.1(P). De momentweerstand en inwendige hefboomsarm volgens 6.1(P) zijn maatgevend en daarom alsmede toegepast.
